

► Practical: Calculation of a Thermodynamic Cycle

Calculation of a simple CLAUSIUS- RANKINE cycle

- First calculation by „hand“ (every student gets a unique task – the solution has to be submitted before the work in the computer lab starts)
- Calculation of the same cycle using the simulation system for thermodynamic cycle processes EBSILON in the computer lab
 - Using an detailed User's Guide
 - Assistance to answering questions
 - Comparison of variants
- Written evaluation of the calculation of variants
