

## Property Libraries for Calculating Heat Cycles and Turbines

Add-In FluidEXL **Graphics**  
for Excel® including  
thermodynamic charts

LibHuGas

### Water and Steam

#### Library LibIF97

- Industrial formulation IAPWS-IF97
- Supplementary backward equations IAPWS-IF97-S01
- Development of further backward equations for region3 of IAPWS-IF97

#### Thermodynamic Charts

- $T, s$  - Diagram
- $h, s$  - Diagram
- $\log p, h$  - Diagram
- $\log p, \log v$  - Diagram
- $\log p, T$  - Diagram
- $p, T$  - Diagram
- $T, h$  - Diagram
- $T, \log v$  - Diagram
- $\log p, s$  - Diagram
- $h, \log v$  - Diagram
- $s, \log v$  - Diagram

### Humid Combustion Gases

#### Library LibIgGas

VDI-Guideline 4670  
for low pressures, high temperatures

#### Library LibHuGas

Model: Ideal mixture of real fluids  
for high pressures, low temperatures

- Ideal mixture of the real fluids

$\text{CO}_2$  - Span and Wagner  
 $\text{H}_2\text{O}$  - IAPWS-95  
 $\text{N}_2$  - Span et al.  
 $\text{O}_2$  - Schmidt and Wagner  
 $\text{Ar}$  - Tegeler et al.

and the ideal gases:

$\text{SO}_2$   
 $\text{CO}$   
 $\text{Ne}$  } scientific equations (Bücker et al.)

Consideration of - Dissociation from VDI-Guideline 4670  
- Pointing effect

### Humid Air

#### Library LibIgAir

VDI-Guideline 4670  
for low pressures, high temperatures

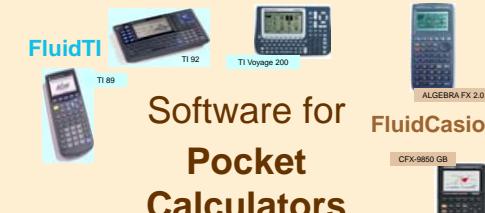

#### Library LibHuAir

Model: Ideal mixture of the real fluids  
for high pressures, low temperatures

- Ideal mixture of the real fluids
  - dry air: Lemmon et al.
  - steam and water: IAPWS-IF97
- Consideration of - Dissociation from VDI-Guideline 4670
  - Pointing effect

#### Thermodynamic Charts

- $h, x$  - Diagram

Software for  
Pocket  
Calculators

University of Applied Sciences of Zittau and Goerlitz  
Department of Technical Thermodynamics

J. Klinger, A. Dittmann  
Technical University of Dresden  
Department of Technical Thermodynamics

## FluidMAT for Mathcad®

**Calculation of the Enthalpy of Steam from the IAPWS-IF97**

```

p := 10      bar    given pressure
t := 300     °C     given temperature
x := -1      kg/kg  vapor fraction (-1 for single face region)
h := h_ptx_97(p,t,x) call of the function from FluidMAT
h = 3051.70 kJ/kg result for enthalpy
+ 
```

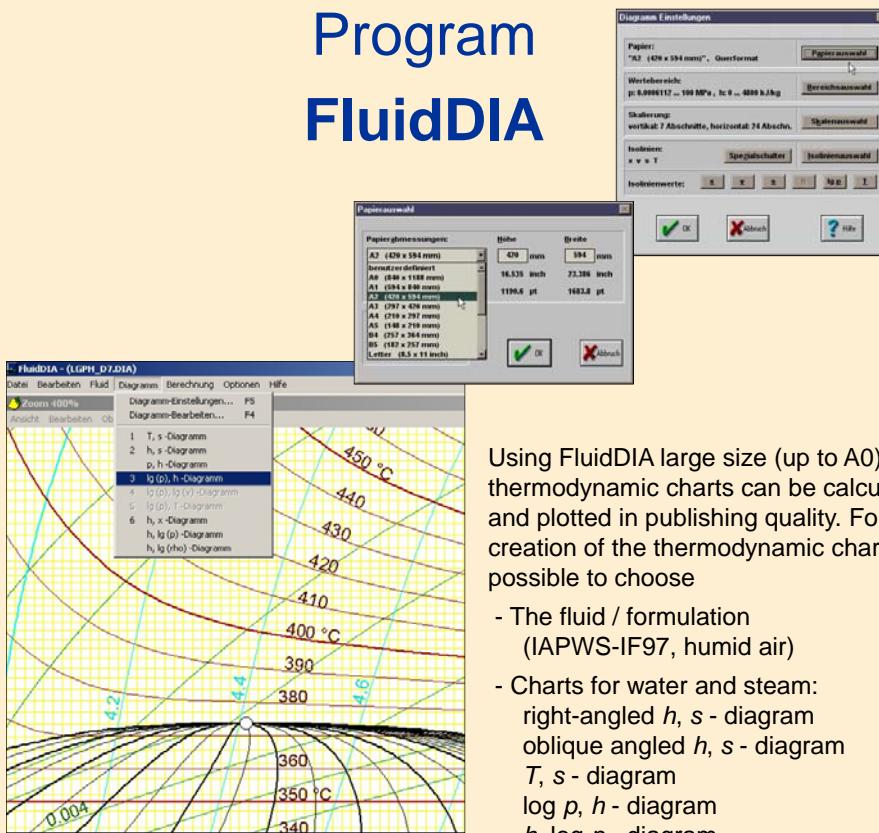

**Funktion einfügen**

Funktionskategorie: Hyperbolisch, Interpolation und Voraussage, Komplexe Zahlen, IAPWS, Logarithmus und Exponential, Regression und Glättung, Spezial, Statistik.

Funktionsname: h\_ptx\_97, cp\_ptx\_97, cv\_ptx\_97, g\_ptx\_97, h\_ns\_97, h\_ptx\_97, kappa\_ptx\_97.

Specific enthalpy h in kJ/kg from pressure p in bar, temperature t in °C and vapour fraction x in kg/kg

## Program FluidDIA

Using FluidDIA large size (up to A0) thermodynamic charts can be calculated and plotted in publishing quality. For the creation of the thermodynamic chart it is possible to choose

- The fluid / formulation (IAPWS-IF97, humid air)
- Charts for water and steam:
  - right-angled  $h, s$  - diagram
  - oblique angled  $h, s$  - diagram
  - $T, s$  - diagram
  - $\log p, h$  - diagram
  - $h, \log p$  - diagram
  - $h, \log r$  - diagram
- Charts for humid air:
  - $h, x$  - diagram for several pressures
