Supplementary Release	Equations	Status
IAPWS-IF97-S01: Supplementary Release on Backward Equations for Pressure as a Function of Enthalpy and Entropy $p(h,s)$ to the IAPWS Industrial Formulation 1997 for the Thermodynamic Properties of Water and Steam.	$p_1(h,s)$ $p_2(h,s)$	adopted in 2001
IAPWS-IF97-S03: Supplementary Release on Backward Equations for the Functions $T(p,h)$, $v(p,h)$ and $T(p,s)$, $v(p,s)$ for Region 3 of the IAPWS Industrial Formulation 1997 for the Thermodynamic Properties of Water and Steam, 2003.	$T_3,v_3(p,h)$ $T_3,v_3(p,s)$	adopted in 2003
IAPWS-IF97-S03rev (Draft): Revised Supplementary Release on Backward Equations for the Functions $T(p,h)$, $v(p,h)$ and $T(p,s)$, $v(p,s)$ for Region 3 of the IAPWS Industrial Formulation 1997 for the Thermodynamic Properties of Water and Steam.	$T_3,v_3(p,h)$ $T_3,v_3(p,s)$ p_{3sat} (h) p_{3sat} (s)	evaluated, to be adopted in 2004
IAPWS-IF97-S04 (Draft): Supplementary Release on Backward Equations $p(h,s)$ for Region 3, Equations as a Function of h and s for the Region Boundaries, and an Equation $T_{sat}(h,s)$ for Region 4 of the IAPWS Industrial Formulation 1997 for the Thermodynamic Properties of Water and Steam.	$p_3(h,s)$ $T_{sat}(h,s)$ $h'(s)$, $h''(s)$ $h_{B13}(s)$ $T_{B23}(h,s)$	evaluated, to be adopted in 2004
Supplementary Release on Backward Equations for Specific Volume as a Function of Pressure and Temperature $v(p,T)$ for Region 3 of the IAPWS Industrial Formulation 1997 for the Thermodynamic Properties of Water and Steam. (Draft)	$v_3(p,T)$	to be submitted in 2004 (adoption planed in 2005

Requirements on Backward Equations

1. Extremely high numerical consistency

- Deviation between the backward equation and the relating fundamental equation
- Corresponds to iteration accuracy otherwise used in numerical calculations of process modeling
- Determined by IAPWS based on an international survey in industry

Example: Backward equations $T(p,h)$

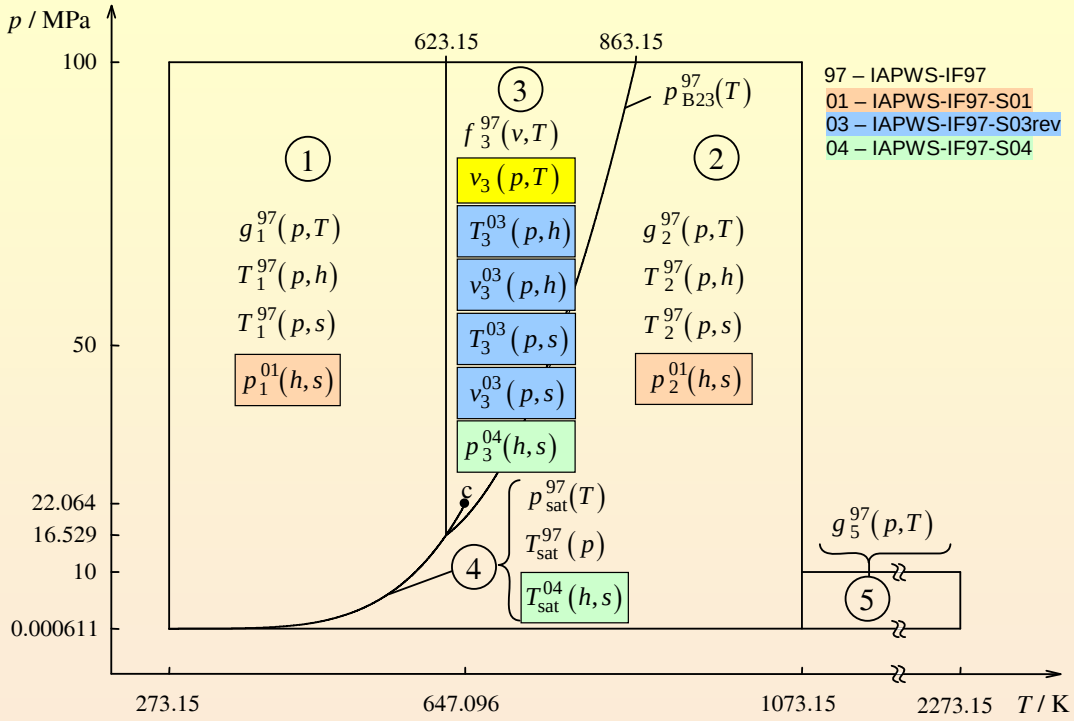
$$|\Delta T| = |T - T(p,h)|$$

where $h(p,T)$ – derived from $g(p,T)$

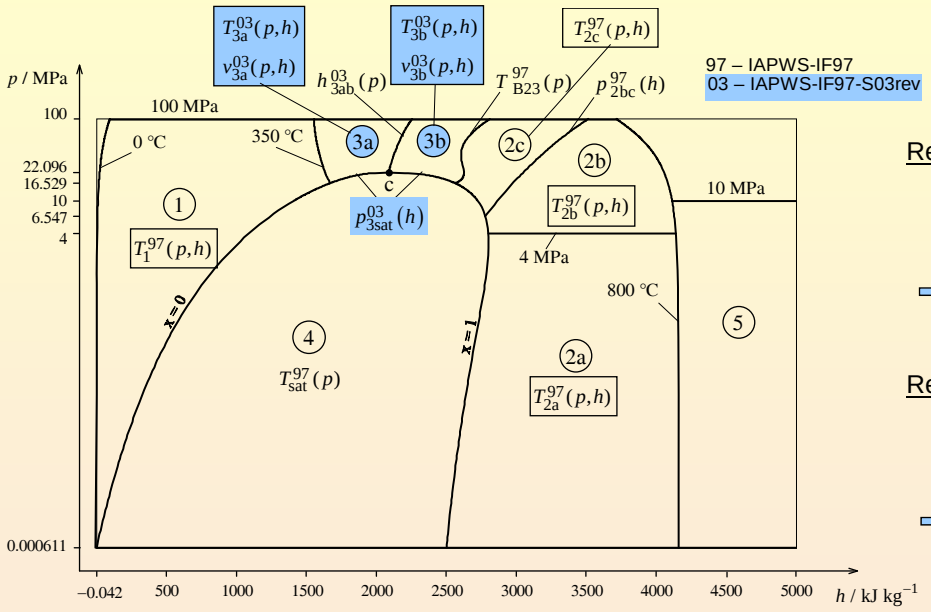
Problem: The numerical consistency is more than one magnitude higher then accuracy of the properties themselfs

2. Calculation of the backward equations should be much faster than the corresponding iterations of the fundamental equations

Supplementary Backward Equations for IAPWS-IF97



Backward and Boundary Equations for Functions of Pressure and Enthalpy (p,h)



Regions 1, 2

$T^{97}(p,h)$ ⇒ $g^{97}(p,T)$

Region3

$T^{03}(p,h)$, $v^{03}(p,h)$ ⇒ $f^{97}(T,v)$

Backward Equations T(p,h) and v(p,h)

Structure

$$\frac{T(p,h)}{T^*} = \sum_{i=1}^{N} n_i \left(\frac{p}{p^*} + a\right)^{I_i} \left(\frac{h}{h^*} + b\right)^{J_i} \qquad \frac{v(p,h)}{v^*} = \sum_{i=1}^{N} n_i \left(\frac{p}{p^*} + a\right)^{I_i} \left(\frac{h}{h^*} + b\right)^{J_i}$$

Numerical consistency

Equation	N	a	b	$\lvert\Delta T\rvert_{tol}$ mK	$\lvert\Delta T\rvert_{max}$ mK
$T_1^{97}(p,h)$	20	0	1	25	23.6
$T_{2a}^{97}(p,h)$	34	0	−2.1	10	9.3

Calculation of backward functions including determination of region boundaries

➡ 5 ... 20 times faster than iteration of fundamental equations

⬇

Calculations of heat cycles, boilers and steam turbines may be 2... 3 times faster when using the backward and boudary equations

14th ICPWS, Kyoto, 2004

Conclusions

- IAPWS provides backward and boundary equations for the functions of (p,h), (p,s), (h,s) and (p,T)
- The equations can be used as a supplement to the Industrial Formulation IAPWS-IF97.
- Their numerical consistencies are sufficient for most applications in heat-cycle, boiler, and steam-turbine calculations.
- Using the equations, the properties as functions of (p,T), (p,h), (p,s), and (h,s) including determination of the region can be calculated without iterations.
- Resulting, process calculations will be between 2 and 3 times faster when using the supplementary backward and boundary equations.
- For applications where the demands on numerical consistency are extremely high, the equations can be used for calculating very accurate starting values in iterations.
