0.1 Zip files for 64-bit Office[®]

The following zip file has been delivered for your computer running a 64-bit Office[®] version:

CD_FluidEXL_Graphics_Eng_LibC3H6O_x64.zip including the following folders an files:

\FLUFT\ \Formulation97\ FluidEXL_Graphics_LibC3H6O_Docu_Eng.pdf FluidEXL_Graphics_Eng.xla LC.dll LibC3H6O.dll LibC3H6O.chm.

0.2 Zip files for 32-bit Office®

The following zip file has been delivered for your computer running a 32-bit Office[®] version:

CD_FluidEXL_Graphics_Eng_LibC3H6O.zip

including the following folders and files:

\FLUFT\ \Formulation97\ FluidEXL_Graphics_LibC3H6O_Docu_Eng.pdf FluidEXL_Graphics_Eng.xla LC.dll LibC3H6O.dll LibC3H6O.chm.

1. Property Functions

Functional Dependence	Function Name	Call from Fortran Program	Property or Function	Unit of the Result
a = f(p, t, x)	a_ptx_C3H6O	A_PTX_C3H6O(P,T,X)	Thermal diffusivity	m²/s
$c_p = f(p, t, x)$	cp_ptx_C3H6O	CP_PTX_C3H6O(P,T,X)	Specific isobaric heat capacity	kJ/(kg K)
$c_v = f(p, t, x)$	cv_ptx_C3H6O	CV_PTX_C3H6O(P,T,X)	Specific isochoric heat capacity	kJ/(kg K)
$\eta = f(p,t,x)$	eta_ptx_C3H6O	ETA_PTX_C3H6O(P,T,X)	Dynamic viscosity	Pa.s
h = f(p, t, x)	h_ptx_C3H6O	H_PTX_C3H6O(P,T,X)	Specific enthalpy	kJ/kg
$\kappa = f(p, t, x)$	ka_ptx_C3H6O	KA_PTX_C3H6O(P,T,X)	Isentropic exponent	-
$\lambda = f(p, t, x)$	lam_ptx_C3H6O	LAM_PTX_C3H6O(P,T,X)	Thermal conductivity	W/(m . K)
v = f(p, t, x)	ny_ptx_C3H6O	NY_PTX_C3H6O(P,T,X)	Kinematic viscosity	m²/s
Pr = f(p, t, x)	pr_ptx_C3H6O	PR_PTX_C3H6O(P,T,X)	Prandtl-number	-
$p_{\rm s} = f(t)$	ps_t_C3H6O	PS_T_C3H6O(T)	Vapor pressure from temperature	bar
$\rho = f(\rho, t, x)$	rho_ptx_C3H6O	RHO_PTX_C3H6O(P,T,X)	Density	kg/m ³
s = f(p, t, x)	s_ptx_C3H6O	S_PTX_C3H6O(P,T,X)	Specific entropy	kJ/(kg K)
$\sigma = f(t)$	sigma_t_C3H6O	SIGMA_T_C3H6O(T)	Surface tension from temperature	N/m
t = f(p,h)	t_ph_C3H6O	T_PH_C3H6O(P,H)	Backward function: Temperature from pressure and enthalpy	°C
t = f(p, s)	t_ps_C3H6O	T_PS_C3H6O(P,S)	Backward function: Temperature from pressure and entropy	°C
$t_{\rm s} = f(p)$	ts_p_C3H6O	TS_P_C3H6O(P)	Saturation temperature from pressure	°C
u = f(p, t, x)	u_ptx_C3H6O	U_PTX_C3H6O(P,T,X)	Specific internal energy	kJ/kg
v = f(p, t, x)	v_ptx_C3H6O	V_PTX_C3H6O(P,T,X)	Specific volume	m³/kg
w = f(p, t, x)	w_ptx_C3H6O	W_PTX_C3H6O(P,T,X)	Isentropic speed of sound	m/s

Functional Dependence	Function Name	Call from Fortran Program	Property or Function	Unit of the Result
x = f(p,h)	x_ph_C3H6O	X_PH_C3H6O(P,H)	Backward function: Vapor fraction from pressure and enthalpy	kg/kg
x = f(p, s)	x_ps_C3H6O	X_PS_C3H6O(P,S)	Backward function: Vapor fraction from pressure and entropy	kg/kg

Units:

t in °C *p* in bar *x* in (kg saturated steam)/(kg wet steam)

Range of validity

for transport properties (*a*, η , λ , *v*, *Pr*):

Temperature range:	from	- 94.65 °C to 276.85 °C
Pressure range:	from	2.3265 x 10 ⁻⁵ bar to 3200 bar

for other properties:

Temperature range:	from - 94.65 °C to 276.85 °C	
Pressure range:	from 2.3265 x 10 ⁻⁵ bar to 7000 bar	

Reference state

h = 0 kJ/kg and s = 0 kJ/(kg K) at p = 1,01325 bar on the saturated liquid line (x = 0)

Details on the vapor fraction x

The wet steam region is calculated automatically by the subprograms. For this purpose the following fixed details on the vapor fraction x are to be considered:

Single-phase region

If the state point to be calculated is located in the single-phase region (liquid or superheated steam) x = -1 must be entered as a pro-forma value.

Wet-steam region

If the state point to be calculated is located in the wet steam region, a value for x between 0 and 1 (x = 0 for saturated liquid, x = 1 for saturated steam) must be entered. In this case, the backward functions result in the appropriate value between 0 and 1 for x. When calculating wet steam either the given value for t and p = -1000 or the given value for p and t = -1000 and in both cases the value for x between 0 and 1 must be entered.

If p and t and x are entered as given values, the program considers p and t to be appropriate to represent the vapor pressure curve. If this is not the case the calculation for the property of the chosen function results in -1.

Wet steam region: Temperature ranges from t_{min} = - 94.65 °C to t_c = 234.95 °C

Pressure ranges from $p_{min} = 2.3265 \times 10^{-5}$ bar to $p_c = 46.9215$ bar

Note:

If the input values are located outside the range of validity, the calculated function will always result in – 1000. Please find more exact details on every function and its corresponding range of validity in the enclosed program documentation in Chapter 3.

2. Application of FluidEXLGraphics in Excel®

The FluidEXL^{Graphics} Add-In has been developed to calculate thermodynamic properties in Excel[®] more conveniently. Within Excel[®], it enables the direct call of functions relating to Water and Steam from the LibC3H6O property program library.

2.1 Installing FluidEXL^{Graphics}

Complete the following steps for initial installation of FluidEXL^{Graphics}. Before you begin, it is best to uninstall any older version of FluidEXL^{Graphics}.

The installation routine for 32-bit and 64-bit versions of Excel is similar. The following instructions are valid for both versions.

After you have downloaded and extracted the zip-file:

CD_FluidEXL_Graphics_LibC3H6O_x64_Eng.zip (for 64 bit version)

or

CD_FluidEXL_Graphics_LibC3H6O_Eng.zip" (for 32 bit version).

you will see the folder

\CD_FluidEXL_Graphics_LibC3H6O_Eng\ (for 32 bit version)

in your Windows Explorer, Total Commander etc.

Now, open this folder by double-clicking on it.

Within this folder you will see the following folders and files:

\FLUFT\ \Formulation97\ FluidEXL_Graphics_Eng.xla FluidEXL_Graphics_LibC3H6O_Docu_Eng LC.dll LibC3H6O.dll LibC3H6O.chm Reg_.reg

Now, please copy the following folders and files

\FLUFT\ \Formulation97\ FluidEXL_Graphics_Eng.xla LibC3H6O.dll LibC3H6O.chm LC.dll

into the folder

C:\Users\[your name]\AppData\Roaming\Microsoft\AddIns\,

where [your name] is your name in the Windows system.

If this folder is not found, follow the next section anyway.

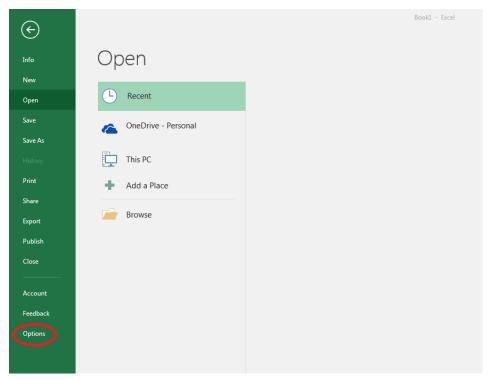

2.2 Registering FluidEXL^{Graphics} as Add-In in Excel[®]

After installation in Windows[®], FluidEXL^{*Graphics*} must be registered in Excel[®] as an Add-In. To do this, start Excel[®] and carry out the following steps:

Η		.⇒ - <u>A</u>											
File	⊢	me In	sert Pag	ge Layout	Formulas	Data	Review	View	♀ Tell me	what you wa	ant to do

- Click on "Add-Ins" in the next menu (Fig. 2.3)

Figure 2.3: Dialog window "Excel Options"

- Select "Excel Add-ins" next to "Manage:" in the lower area of the menu
- Then click the "Go..." button
- Click "Browse" in the following window (Fig. 2.4)

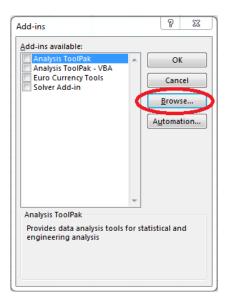

Figure 2.4: Dialog window "Add-ins"

- Excel opens the AddIns folder. This is usually
 C:\Users\[your name]\AppData\Roaming\Microsoft\AddIns\.
- If the FluidEXL files have already been copied to this directory in section 2.1, please skip the following indented section. If not, follow the indented instructions to successful paste the needed files for the FluidEXL Add-In:

In the upper part of the "Browse" window the correct Add-In path is displayed (see Figure 2.5). Please note that not the entire path is displayed.

Figure 2.5: "Browse"-Window

Please copy this path and paste it into your file manager. Now, please copy the following directories and files:

\FLUFT\ \Formulation97\ LC.dll FluidEXL_Graphics_Eng.xla LibC3H6O.dll LibC3H6O.chm from the delivered CD-folder into this folder.

- Click "FluidEXL_Graphics_Eng.xla" in this folder (see Fig. 2.5) and click "OK."
- Now, "FluidEXL Graphics Eng" will be shown in the list of Add-ins (see Fig. 2.6).
 (If a checkmark is in the box next to the name "FluidEXL Graphics Eng", this Add-In will automatically be loaded whenever Excel starts. This will continue to occur unless the checkmark is removed from the box by clicking on it.)
- In order to register the Add-In click the "OK" button in the "Add-ins" window (see Fig. 2.6).

Figure 2.8: FluidEXLGraphics menu bar

The Installation of FluidEXL*Graphics* in Excel[®] is now complete.

An example calculation of "LibC3H6O" DLL library property functions can be found in chapter 2.4.

2.3 Licensing the LibC3H6O Property LibC3H6Orary

The licensing procedure has to be carried out when Excel[®] starts up and a FluidEXL*Graphics* prompt message appears. In this case, you will see the "License Information" window (see figure below).

Figure 2.12: "License Information" window

Here you will have to type in the license key. You can find contact information on the "Content" page of this User's Guide or by clicking the yellow question mark in the "License Information" window. Then the following window will appear:

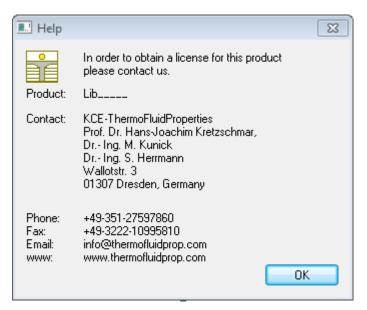

Figure 2.13: "Help" window

If you do not enter a valid license it is still possible to start Excel[®] by clicking "Cancel" twice. In this case, the LibC3H6O property library will display the result "-11111111" for every calculation.

The "License Information" window will appear every time you start Excel[®] unless you uninstall FluidEXL^{Graphics} according to the description in section 2.6 of this User's Guide.

Should you not wish to license the LibC3H6O property library, you have to delete the files LibC3H6O.dll

LibC3H6O.chm

in the installation folder of FluidEXLGraphics (the standard being)

C:\Program Files\FluidEXL_Graphics_Eng

using an appropriate program such as Explorer® or Norton Commander.

Note:

The product name "LibC3H6O____ in Figure 2.12 and 2.13 stands for the LibC3H6Orary you are installing. In this case it is the LibC3H6O library.

2.4 Example calculation

Now we will calculate, step by step, the specific enthalpy h as a function of pressure p, temperature t, and vapor fraction x, using FluidEXLGraphics.

- Start Excel®
- Enter a value for *p* in bar in a cell
 (Range of validity: *p*t = 2.3265 x 10⁻⁵ bar to 7000 bar)
 ⇒ e. g.: Enter the value 10 into cell A2
- Enter a value for *t* in °C in a cell (Range of validity: t = - 94.65 °C to 276.85 °C)
 ⇒ e. g.: Enter the value 200 into cell B2
- Enter a value for x in kg saturated steam/kg wet steam in a cell
 Since the wet steam region is calculated automatically by the subprograms, the following fixed details on the vapor fraction x are to be considered when the value for x is entered:

Single-phase region

If the state point to be calculated is located in the single-phase region (liquid or superheated steam) x = -1 must be entered as a pro-forma value.

Wet-steam region

If the state point to be calculated is located in the single-phase region (liquid or superheated steam) x = -1 must be entered as a pro-forma value.

If the state point to be calculated is located in the wet steam region, a value for x between 0 and 1 (x = 0 for saturated liquid, x = 1 for saturated steam) must be entered. When calculating wet steam either the given value for t and p = -1000 or the given value for p and t = -1000 and in both cases the value for x between 0 and 1 must be entered. If p and t and x are entered as given values, the program considers p and t to be appropriate to represent the vapor pressure curve.

(Vapor-pressure curve of ethanol:	$t_{min} = -95.65 \text{ °C}$ to $t_{c} = 234.95 \text{ °C}$
	$p_{min} = 2.3265 \times 10^{-5}$ bar to $p_{c} = 46.9215$ bar

\Rightarrow e.g.: Enter –1 into the C2 cell.

- Click the cell in which the enthalpy *h* in kJ/kg is to be displayed.

 \Rightarrow e.g.: Click the D2 cell.

 Click "Calculate" in the menu bar of FluidEXLGraphics. Now the "Insert Function" window appears (see Figure 2.14).

Cal	<mark>culate</mark> Diagrams ▼ Num	ber Format	t ? *

Figure 2.14: Choice of library and function name

- Search and click the "Acetone LibC3H6O" library under "Or select a category:" in the upper part of the window.
- Search and click the h_ptx_C3H6O function under "Select a function:" right below.

Here it is possible to get more information on the range of validity, measuring units, error responses, etc. by clicking the "Help on this function" button.

- Click "OK".

The window shown in the next figure will now appear.

Function Argun	nents		? ×

Figure 2.15: Input menu for the function

- The cursor is now situated on the line next to " p in bar ". You can now enter the value for p either by clicking the cell with the value for p by entering the name of the cell with the value for p, or by entering the value for p directly.

 \Rightarrow e. g.: Click on the cell A2

- Situate the cursor next to "t in °C" and enter the value for *t* by clicking the cell with the value for *t*, by entering the name of the cell with the value for *t*, or by entering the value for *t* directly.
- \Rightarrow e. g.: Type B2 into the window next to "p"
- Situate the cursor next to "x in kg/kg" and enter the value for x by clicking the cell with the value for x, by entering the name of the cell with the value for x, or by entering the value for x directly.

 \Rightarrow e. g.: Click on the cell C2

The window should now look like the following figure:

Calculate Diagrams * Number Format ? *									
	Custo	om Toolbars							
	DATE	- (0	$X \checkmark f_x =$	h_ptx_C3H6O	(A2;B2;C2)

12		X in kg/kg Vapor fraction							
13									
14 15									
	Formula re	sult = 712.4491	4//						
17	16 Image: Help on this function 17 OK								
18									

Figure 2.16: Input menu showing the result

- Click the "OK" button.

The result for h in kJ/kg appears in the cell selected above.

 \Rightarrow The result for *h* in our sample calculation here is: 712.4491477 kJ/kg.

The calculation of h = f(p, t, x) has thus been carried out. You can now arbitrarily change the values for p, t or x in the appropriate cells. This shows that the Excel[®] data flow and the DLL calculations are working together successfully.

Note:

If the calculation results in -1000, this indicates that the values entered are located outside the range of validity shown in Chapter 1. More detailed information on each function and its range of validity is available in Chapter 3.

For further property functions calculable in FluidEXLGraphics, see the function table in Chapter 1.

Number Formats

When using FluidEXL^{Graphics} you have the option of choosing special number formats in advance.

Changes can be made as follows:

- Click the cell or select and click on the cells you wish to format. (In empty cells the new format will be applied once a value has been entered.)
- Click "Number Format" in the FluidEXL^{Graphics} menu bar.

- Select the desired number format in the dialog box which appears:

"STD – Standard":	Insignificant zeros behind the decimal point are not shown.
"FIX – Fixed Number of Digits":	All set decimal places are shown, including insignificant zeros.
"SCI – Scientific Format":	Numbers are always shown in the exponential form with the set number of decimal places.

- Set the "Number of decimal places" by entering the number into the appropriate window.
- Confirm this by clicking the "OK" button.

As an example, the table below shows the three formats for the number 1.230 adjusted for three decimal places:

STD	1.23
FIX	1.230
SCI	1.230E+00

This formatting can also be applied to cells which have already been calculated.

2.5 The FluidEXL^{Graphics} Help System

As mentioned earlier, FluidEXL^{Graphics} also provides detailed help functions. Information on individual property functions may be accessed via the following steps:

- Click "Calculate" in the FluidEXL Graphics menu bar.
- Click on the "LibC3H6O" library under "Or select a <u>category</u>:" in the "Insert Function" window which will appear.
- Click the "Help on this function" button in the lower left-hand edge of the "Insert Function" window.

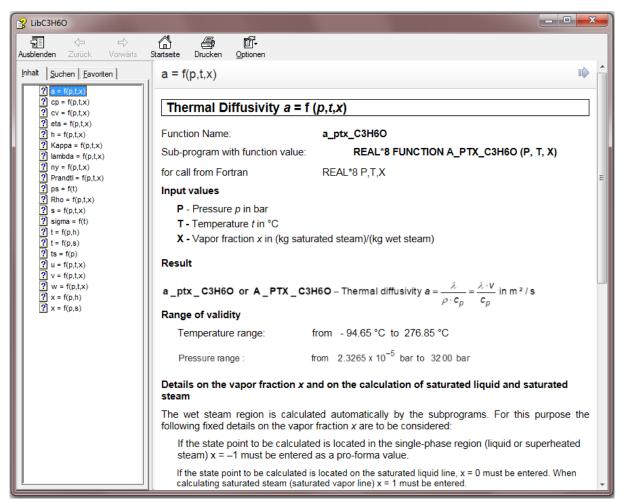

Figure 2.17: Help Window

If the LibC3H6O.chm function help cannot be found, you will be redirected to a Microsoft[®] help website by your standard browser. In this case, the LibC3H6O.chm file has to be copied into the folder of FluidEXL^{Graphics}, in the standard case

```
C:\Program Files\FluidEXL_Graphics_Eng
```

to use the help system.

2.6 Removing FluidEXLGraphics

2.6.1 Removing LibC3H6O Library

Should you wish to remove only the LibC3H6O library, delete the files

LibC3H6O.dll LibC3H6O.chm

in the directory selected for the installation of FluidEXLGraphics, in the standard case,

C:\Program Files\FluidEXL_Graphics_Eng

by using an appropriate program such as Explorer[®] or Norton Commander.

2.6.2 Unregistering and uninstalling FluidEXL^{Graphics} as Add-In in versions of Excel[®] from 2007 onwards (for earlier versions see 2.6.3)

In order to unregister the FluidEXL^{Graphics} Add-In in versions of Excel[®] from 2007 onwards start Excel[®] and carry out the following commands:

- Click the "File" button in the upper left corner of Excel®
- Click on the "Options" button in the menu which appears

B	ف م	<i>с</i> ≥ - <u>A</u>	Ŧ									Bo	ook1 - Excel

Figure 2.21: Dialog window "Add-Ins"

In order to remove FluidEXL^{Graphics} from Windows and the hard drive, click "Start" in the Windows task bar, select "Settings" and click "Control Panel."

Now, double click on "Add or Remove Programs."

In the list box of the "Add or Remove Programs" window that appears, select

"FluidEXL Graphics Eng"

by clicking on it and then clicking the "Add/Remove..." button.

Click "Automatic" in the following dialog box and then the "Next >" button.

Click "Finish" in the "Perform Uninstall" window.

Answer the question of whether all shared components should be removed with "Yes to All." Finally, close the "Add or Remove Programs" and "Control Panel" windows.

Now FluidEXLGraphics has been completely removed from your computer.

2.6.3 Unregistering and uninstalling FluidEXL^{Graphics} as Add-In in Excel[®], versions 2003 or earlier

To remove FluidEXLGraphics completely, proceed as follows: First the registration of

FluidEXL_Graphics_Eng.xla

has to be cancelled in Excel[®].

In order to do this, click "Tools" in the upper menu bar of Excel[®] and here "Add-Ins...". Untick the box on the left-hand side of

"FluidEXL Graphics Eng"

in the window that appears and click the "OK" button. The additional menu bar of FluidEXL^{Graphics} disappears from the upper part of the Excel[®] window. Afterwards, we

recommend closing Excel[®].

If the FluidEXL^{Graphics} menu bar does not disappear, take the following steps:

Click "View" in the upper menu bar of Excel[®], then "Toolbars" and then "Customize..." in the list box which appears.

"FluidEXL Graphics Eng"

is situated at the bottom of the "Toolbars" entries, which must be selected by clicking on it. Delete the entry by clicking "Delete". You will be asked whether you really want to delete the toolbar – click "OK".

Within the next step delete the files

LibC3H6O.dll LibC3H6O.chm

in the directory selected for the installation of FluidEXL^{Graphics}, in the standard case,

C:\Program Files\FluidEXL_Graphics_Eng

using an appropriate program such as Explorer[®] or Norton Commander.

In order to remove FluidEXL^{Graphics} from Windows and the hard drive, click "Start" in the Windows task bar, select "Settings" and click "Control Panel". Now double-click on "Add or Remove Programs". In the list box of the "Add/Remove Programs" window that appears select

"FluidEXL Graphics Eng"

by clicking on it and click the "Add/Remove..." button. In the following dialog box, click "Automatic" and then "Next >". Click "Finish" in the "Perform Uninstall" window. Answer the question whether all shared components shall be removed with "Yes to All". Finally, close the "Add/Remove Programs" and "Control Panel" windows.

Now FluidEXL^{Graphics} has been removed.

3. Program Documentation

Thermal Diffusivity *a* = f (*p*,*t*,*x*)

Function Name:

a_ptx_C3H6O

Sub-program with function value: for call from Fortran

REAL*8 FUNCTION A_PTX_C3H6O (P, T, X) REAL*8 P,T,X

Input values

- **P** Pressure *p* in bar
- **T** Temperature *t* in °C
- X Vapor fraction x in (kg saturated steam)/(kg wet steam)

Result

a_ptx_C3H6O or A_PTX_C3H6O – Thermal diffusivity $a = \frac{\lambda}{\rho \cdot c_p} = \frac{\lambda \cdot v}{c_p}$ in m²/s

Range of validity

Temperature range:	from	- 94.65 °C to 276.85 °C
Pressure range :	from	2.3265×10^{-5} bar to 3200 bar

Details on the vapor fraction x and on the calculation of saturated liquid and saturated steam

The wet steam region is calculated automatically by the subprograms. For this purpose the following fixed details on the vapor fraction *x* are to be considered:

If the state point to be calculated is located in the single-phase region (liquid or superheated steam) x = -1 must be entered as a pro-forma value.

If the state point to be calculated is located on the saturated liquid line, x = 0 must be entered. When calculating saturated steam (saturated vapor line) x = 1 must be entered. The calculation for *x*-values between 0 and 1 is not possible.

When calculating saturated liquid or saturated steam, it is adequate to enter either the given value for t = -1000, or the given value for p = -1000, plus the value for x (x = 0 or x = 1). If p = -1000, and t = -1000, plus the value for x (x = 0 or x = 1). If p = -1000, and t = -1000, plus the value for x (x = 0 or x = 1). If p = -1000, and t = -1000, plus the value for x (x = 0 or x = 1). If p = -1000, and t = -1000, plus the value for x (x = 0 or x = 1). If p = -1000, and t = -1000, plus the value for x (x = 0 or x = 1). If p = -1000, and t = -1000, plus the value for x (x = 0 or x = 1). If p = -1000, and t = -1000, plus the value for x (x = 0 or x = 1). If p = -1000, plus the value for x (x = 0 or x = 1). If p = -1000, plus the value for x (x = 0 or x = 1). If p = -1000, plus the value for x (x = 0 or x = 1). If p = -1000, plus the value for x (x = 0 or x = 1). If p = -1000, plus the value for x (x = 0 or x = 1). If p = -1000, plus the value for x (x = 0 or x = 1). If p = -1000, plus the value for x (x = 0 or x = 1). If p = -1000, plus the value for x (x = 0 or x = 1). If p = -1000, plus the value for x (x = 0 or x = 1). If p = -1000, plus the value for x (x = 0 or x = 1). If p = -1000, plus the value for x (x = 0 or x = 1). If p = -1000, plus the value for x (x = 0 or x = 1). If p = -1000, plus the value for x (x = 0 or x = 1). If p = -1000, plus the value for x (x = 0 or x = 1). If p = -1000, plus the value for x (x = 0 or x = 1). If p = -1000, plus the value for x (x = 0 or x = 1). If p = -1000, plus the value for x = 0 or x = -1.

Wet steam region: Temperature ranges from $t_{min} = -94.65$ °C to $t_c = 234.95$ °C Pressure ranges from $p_{min} = 2.3265 \times 10^{-5}$ bar to $p_c = 46.9215$ bar

Results for wrong input values

Result A_PTX_C3H6O = -1000 or a_ptx_C3H6O = -1000 for input values:

Single phase region:

Liquid or overheated steam (x = -1):

- at $p < 2.3265 \times 10^{-5}$ bar or p > 3200 bar

- at *t* < - 94.65 °C or *t* > 276.85 °C

Wet steam region $(0 \le x \le 1)$:

- at 0 < x < 1, i.e. calculation in the wet steam region not possible!

- at p = -1000 bar and $t < t_{min}$ or $t > t_{c}$

- at t = -1000 bar and $p < p_{min}$ or $p > p_{c}$

- at $p < p_{\min}$ or $p > p_{C}$ or at $t < t_{\min}$ or $t > t_{C}$

References: [1], [3], [4], [5], [7]

Specific Isobaric Heat Capacity $c_p = f(p,t,x)$

Function Name:

cp_ptx_C3H6O

Sub-program with function value: for call from Fortran

REAL*8 FUNCTION CP_PTX_C3H6O (P, T, X) REAL*8 P,T,X

Input values

- P Pressure p in bar
- T Temperature t in °C
- X Vapor fraction x in (kg saturated steam)/(kg wet steam)

Result

cp_ptx_C3H6O or CP_PTX_C3H6O - Specific isobaric heat capacity cp in kJ/ (kg K)

Range of validity

Temperature range:	from	- 94.65 °C to 276.85 °C
Pressure range :	from	2.3265×10^{-5} bar to 7000 bar

Details on the vapor fraction *x* and on the calculation of saturated liquid and saturated steam

The wet steam region is calculated automatically by the subprograms. For this purpose the following fixed details on the vapor fraction *x* are to be considered:

If the state point to be calculated is located in the single-phase region (liquid or superheated steam) x = -1 must be entered as a pro-forma value.

If the state point to be calculated is located on the saturated liquid line, x = 0 must be entered. When calculating saturated steam (saturated vapor line) x = 1 must be entered. The calculation for *x*-values between 0 and 1 is not possible.

When calculating saturated liquid or saturated steam, it is adequate to enter either the given value for tand p = -1000, or the given value for p and t = -1000, plus the value for x (x = 0 or x = 1). If p and tand x are entered as given values, the program will consider p and t to be appropriate to represent the vapor pressure curve.

Wet steam region: Temperature ranges from $t_{min} = -94.65$ °C to $t_c = 234.95$ °C Pressure ranges from $p_{min} = 2.3265 \times 10^{-5}$ bar to $p_c = 46.9215$ bar

Results for wrong input values

Result CP_PTX_C3H6O = -1000 or cp_ptx_C3H6O = -1000 for input values:

Single phase region:

Liquid or overheated steam (x = -1):

- at $p < 2.3265 \times 10^{-5}$ bar or p > 7000 bar
- at t < 94.65 °C or t > 276.85 °C

Wet steam region $(0 \le x \le 1)$:

- at 0 < x < 1, i.e. calculation in the wet steam region not possible!
- at p = -1000 bar and $t < t_{min}$ or $t > t_{c}$
- at t = -1000 bar and $p < p_{min}$ or $p > p_{c}$
- at $p < p_{\min}$ or $p > p_{c}$ or at $t < t_{\min}$ or $t > t_{c}$

Specific Isochoric Heat Capacity $c_v = f(p, t, x)$

Function Name:

cv_ptx_C3H6O

Sub-program with function value: for call from Fortran

REAL*8 FUNCTION CV_PTX_C3H6O (P, T, X) REAL*8 P,T,X

Input values

- **P** Pressure *p* in bar
- T Temperature t in °C
- X Vapor fraction x in (kg saturated steam)/(kg wet steam)

Result

cv_ptx_C3H6O or CV_PTX_C3H6O - Specific isochoric heat capacity cv in kJ/ (kg K)

Range of validity

Temperature range:	from	- 94.65 °C to 2	276.85 °	С
Pressure range :	from	2.3265 x 10 ⁻⁵	bar to	7000 bar

Details on the vapor fraction x and on the calculation of saturated liquid and saturated steam

The wet steam region is calculated automatically by the subprograms. For this purpose the following fixed details on the vapor fraction *x* are to be considered:

If the state point to be calculated is located in the single-phase region (liquid or superheated steam) x = -1 must be entered as a pro-forma value.

If the state point to be calculated is located on the saturated liquid line, x = 0 must be entered. When calculating saturated steam (saturated vapor line) x = 1 must be entered. The calculation for *x*-values between 0 and 1 is not possible.

When calculating saturated liquid or saturated steam, it is adequate to enter either the given value for tand p = -1000, or the given value for p and t = -1000, plus the value for x (x = 0 or x = 1). If p and tand x are entered as given values, the program will consider p and t to be appropriate to represent the vapor pressure curve.

Wet steam region: Temperature ranges from $t_{min} = -94.65$ °C to $t_c = 234.95$ °C Pressure ranges from $p_{min} = 2.3265 \times 10^{-5}$ bar to $p_c = 46.9215$ bar

Results for wrong input values

Result CP_PTX_C3H6O = -1000 or cp_ptx_C3H6O = -1000 for input values:

Single phase region:

Liquid or overheated steam (x = -1):

- at $p < 2.3265 \times 10^{-5}$ bar or p > 7000 bar
- at t < 94.65 °C or t > 276.85 °C

Wet steam region $(0 \le x \le 1)$:

- at 0 < x < 1, i.e. calculation in the wet steam region not possible!

- at p = -1000 bar and $t < t_{min}$ or $t > t_{c}$

- at t = -1000 bar and $p < p_{min}$ or $p > p_{c}$
- at $p < p_{min}$ or $p > p_{c}$ or at $t < t_{min}$ or $t > t_{c}$

Dynamic Viscosity $\eta = f(p, t, x)$

Function Name:

eta_ptx_C3H6O

Sub-program with function value: for call from Fortran

REAL*8 FUNCTION ETA_PTX_C3H6O (P, T, X) REAL*8 P,T,X

Input values

- **P** Pressure *p* in bar
- T Temperature t in °C
- **X** Vapor fraction *x* in (kg saturated steam)/(kg wet steam)

Result eta_ptx_C3H6O or ETA_PTX_C3H6O - Dynamic viscosity *η* in Pa s

Range of validity

Temperature range:	from	- 94.65 °C to 2	276.85 °	С
Pressure range :	from	2.3265 x 10 ⁻⁵	bar to	3200 bar

Details on the vapor fraction x and on the calculation of saturated liquid and saturated steam

The wet steam region is calculated automatically by the subprograms. For this purpose the following fixed details on the vapor fraction *x* are to be considered:

If the state point to be calculated is located in the single-phase region (liquid or superheated steam) x = -1 must be entered as a pro-forma value.

If the state point to be calculated is located on the saturated liquid line, x = 0 must be entered. When calculating saturated steam (saturated vapor line) x = 1 must be entered. The calculation for *x*-values between 0 and 1 is not possible.

When calculating saturated liquid or saturated steam, it is adequate to enter either the given value for t and p = -1000, or the given value for p and t = -1000, plus the value for x (x = 0 or x = 1). If p and t and x are entered as given values, the program will consider p and t to be appropriate to represent the vapor pressure curve.

Wet steam region: Temperature ranges from $t_{min} = -94.65$ °C to $t_{c} = 234.95$ °C Pressure ranges from $p_{min} = 2.3265 \times 10^{-5}$ bar to $p_{c} = 46.9215$ bar

Results for wrong input values

Result ETA_PTX_C3H6O = -1000 or eta_ptx_C3H6O = -1000 for input values:

Single phase region:

Liquid or overheated steam (x = -1):

- at $p < 2.3265 \times 10^{-5}$ bar or p > 3200 bar
- at t < 94.65 °C or t > 276.85 °C

Wet steam region $(0 \le x \le 1)$:

ny_ptx_C3H6O or NY_PTX_C3H6O – kinematic viscosity v in m²/s

Range of validity

Temperature range:from - 94.65 °C to 276.85 °CPressure range :from 2.3265×10^{-5} bar to 3200 bar

Details on the vapor fraction x and on the calculation of saturated liquid and saturated steam

The wet steam region is calculated automatically by the subprograms. For this purpose the following fixed details on the vapor fraction *x* are to be considered:

If the state point to be calculated is located in the single-phase region (liquid or superheated steam) x = -1 must be entered as a pro-forma value.

If the state point to be calculated is located on the saturated liquid line, x = 0 must be entered. When calculating saturated steam (saturated vapor line) x = 1 must be entered. The calculation for *x*-values between 0 and 1 is not possible.

When calculating saturated liquid or saturated steam, it is adequate to enter either the given value for tand p = -1000, or the given value for p and t = -1000, plus the value for x (x = 0 or x = 1). If p and tand x are entered as given values, the program will consider p and t to be appropriate to represent the vapor pressure curve.

Wet steam region: Temperature ranges from $t_{min} = -94.65$ °C to $t_c = 234.95$ °C Pressure ranges from $p_{min} = 2.3265 \times 10^{-5}$ bar to $p_c = 46.9215$ bar

Results for wrong input values

Result NY_PTX_C3H6O = -1000 or ny_ptx_C3H6O = -1000 for input values:

Single phase region:

Liquid or overheated steam (x = -1):

- at $p < 2.3265 \times 10^{-5}$ bar or p > 3200 bar

- at t < - 94.65 °C or t > 276.85 °C

Wet steam region $(0 \le x \le 1)$:

- at 0 < x < 1, i.e. calculation in the wet steam region not possible!
- at p = -1000 bar and $t < t_{min}$ or $t > t_{c}$
- at t = -1000 bar and $p < p_{min}$ or $p > p_{c}$
- at $p < p_{min}$ or $p > p_c$ or at $t < t_{min}$ or $t > t_c$

The following thermodynamic and transport properties can be calculated^a:

Thermodynamic Properties

- Vapor pressure p_s
- Saturation temperature T_s
- Density ρ
- Specific volume v
- Enthalpy h
- Internal energy u
- Entropy s
- Exergy e
- Isobaric heat capacity c_p
- Isochoric heat capacity c_v
- Isentropic exponent κ
- Speed of sound w
- Surface tension σ

Transport Properties

- Dynamic viscosity η
- Kinematic viscosity v
- Thermal conductivity λ
- Prandtl number Pr
- Thermal diffusivity a

Backward Functions

- *T*, *v*, *s* (*p*,*h*)
- *T*, *v*, *h* (*p*,*s*)
- *p*, *T*, *v* (*h*,*s*)
- p, T (v,h)
- p, T (v,u)

Thermodynamic Derivatives

 Partial derivatives used in process modeling can be calculated.

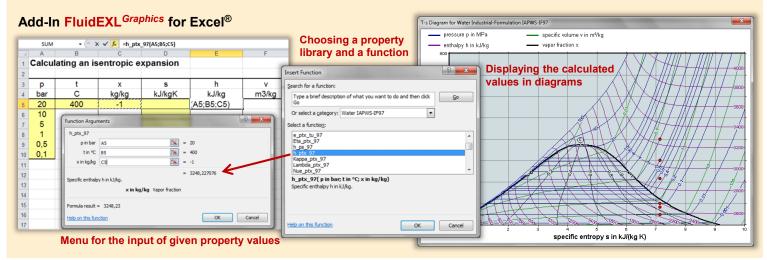

a Not all of these property functions are available in all property libraries.

The following thermodynamic and transport properties^a can be calculated in Excel[®], MATLAB[®], Mathcad[®], Engineering Equation Solver[®] (EES), DYMOLA[®] (Modelica), SimulationX[®] and LabVIEW™:

Thermodynamic Properties

- Vapor pressure p_s
- Saturation temperature $T_{\rm s}$
- Density ρ
- Specific volume v
- Enthalpy h
- Internal energy u
- Entropy s
- Exergy e
- Isobaric heat capacity c_p
- Isochoric heat capacity c_v
- Isentropic exponent κ
- Speed of sound w
- Surface tension σ

Transport Properties

- Dynamic viscosity η
- Kinematic viscosity v
- Thermal conductivity λ
- Prandtl number Pr
- Thermal diffusivity a

Backward Functions

- *T*, *v*, *s* (*p*,*h*)
- T, v, h (p,s)
- p, T, v (h,s)
- p, T (v,h)
- p, T (v,u)

Thermodynamic Derivatives

 Partial derivatives used in process modeling can be calculated.

a Not all of these property functions are available in all property libraries.
