0.1 Zip files for 64-bit Office®

The following zip file has been delivered for your computer running a 64-bit Office® version:

CD_FluidEXL_Graphics_Eng_LibO2_x64.zip

including the following folders and files:

\FLUFT\

\Formulation97\

FluidEXL_Graphics_LibO2_Docu_Eng.pdf

FluidEXL_Graphics_Eng.xla

LC.dll

LibO2.dll

LibO2.chm.

0.2 Zip files for 32-bit Office®

The following zip file has been delivered for your computer running a 32-bit Office® version:

CD_FluidEXL_Graphics_Eng_LibO2.zip

including the following folders and files:

\FLUFT\

\Formulation97\

FluidEXL_Graphics_LibO2_Docu_Eng.pdf

FluidEXL_Graphics_Eng.xla

LC.dll

LibO2.dll

LibO2.chm.

1. Program Functions

1.1 Range of Validity

Table 1.1: Range of validity

Bulks	Abbreviations	Values and Units
pressures: minimal at triple point at critical point maximal	P_{\min}	$1 \cdot 10^{-5}$ bar
	P_t	0.12532 bar
	P_c	50.43 bar
	P_{\max}	818 bar
temperatures: minimal at critical point maximal	$T_{\min} = T_t$	-218.789°C
	T_c	-118.569°C
	T_{\max}	1726.85°C

The sub-programs of the LibO2 DLL and the functions of the Add-In FluidEXL *Graphics* for Excel are listed in the following section.

All sub-programs and functions can be applied in the entire range of validity of the LibO2. The call of the necessary equation of state for each calculation region will be realized within the program.

1.2 Functions

Functional Dependence	Function Name	Call from DLL LibO2, Result as Parameter	Property or Function	Unit of the Result
$a = f(p, t, x)$	a_ptx_O2	= A_PTX_O2(P,T,X)	Thermal diffusivity	m ² /s
$\alpha_P = f(p, t, x)$	alphap_ptx_O2	= ALPHAP_PTX_O2(P,T,X)	Relative pressure coefficient	1/K
$\alpha_v = f(p, t, x)$	alphav_ptx_O2	= ALPHAV_PTX_O2(P,T,X)	Isobaric cubic expansion coefficient	1/K
$\beta_P = f(p, t, x)$	betap_ptx_O2	= BETAP_PTX_O2(P,T,X)	Isothermal stress coefficient	kg/m ³
$c_p = f(p, t, x)$	cp_ptx_O2	= CP_PTX_O2(P,T,X)	Specific isobaric heat capacity	kJ/(kg · K)
$c_v = f(p, t, x)$	cv_ptx_O2	= CV_PTX_O2(P,T,X)	Specific isochoric heat capacity	kJ/(kg · K)
$\eta = f(p, t, x)$	eta_ptx_O2	= ETA_PTX_O2(P,T,X)	Dynamic viscosity	Pa · s = kg/(m · s)
$h = f(p, t, x)$	h_ptx_O2	= H_PTX_O2(P,T,X)	Specific enthalpy	kJ/kg
$\kappa = f(p, t, x)$	kappa_ptx_O2	= KAPPA_PTX_O2(P,T,X)	Isentropic exponent	-
$\kappa_T = f(p, t, x)$	kappat_ptx_O2	= KAPPAT_PTX_O2(P,T,X)	Isothermal compressibility	1/kPa
$\lambda = f(p, t, x)$	lambda_ptx_O2	= LAM_PTX_O2(P,T,X)	Thermal conductivity	W/(m · K)
$\nu = f(p, t, x)$	ny_ptx_O2	= NY_PTX_O2(P,T,X)	Kinematic viscosity	m ² /s
$p_{mel} = f(t)$	p_mel_t_O2	= P_MEL_T_O2(T)	Melting pressure	bar
$Pr = f(p, t, x)$	Pr_ptx_O2	= PR_PTX_O2(P,T,X)	Prandtl number	-
$p_s = f(t)$	ps_t_O2	= PS_T_O2(T)	Vapor pressure	bar
$\rho = f(p, t, x)$	rho_ptx_O2	= RHO_PTX_O2(P,T,X)	Density	kg / m ³
$s = f(p, t, x)$	s_ptx_O2	= S_PTX_O2(P,T,X)	Specific entropy	kJ/(kg · K)
$t_{mel} = f(p)$	t_mel_p_O2	= T_MEL_P_O2(P)	Melting temperature	°C

Functional Dependence	Function Name	Call from DLL LibO2, Result as Parameter	Property or Function	Unit of the Result
$t = f(p, h)$	t_ph_O2	= T_PH_O2(P,H)	Backward function: Temperature from pressure and enthalpy	°C
$t_s = f(p)$	ts_p_O2	= TSP_O2(P)	Saturation temperature	°C
$t = f(p, s)$	t_ps_O2	= T_PS_O2(P,S)	Backward function: Temperature from pressure and entropy	°C
$u = f(p, t, x)$	u_ptx_O2	= U_PTX_O2(P,T,X)	Specific internal energy	kJ/kg
$v = f(p, t, x)$	v_ptx_O2	= V_PTX_O2(P,T,X)	Specific volume	m ³ /kg
$w = f(p, t, x)$	w_ptx_O2	= W_PTX_O2(P,T,X)	Speed of sound	m/s
$x = f(p, h)$	x_ph_O2	= X_PH_O2(P,H)	Backward function: Vapor fraction from pressure and enthalpy	kg/kg
$x = f(p, s)$	x_ps_O2	= X_PS_O2(P,S)	Backward function: Vapor fraction from pressure and entropy	kg/kg
$z = f(p, t, x)$	z_ptx_O2	= Z_PTX_O2(P,T,X)	Compression factor	-

Units: t in °C
 p in bar
 x in kg saturated steam/kg wet steam

Range of validity of the LibO2

Temperature: from 54.361 K (-218.789°C) to 2000 K (1726.85°C)
 Pressure: from 0.00001 bar to 818 bar

Details on the vapor fraction x and on the calculation of wet steam

The wet steam region is calculated automatically by the subprograms. For this purpose the following fixed details on the vapor fraction x are to be considered:

Single-phase region

If the state point to be calculated is located in the single-phase region (liquid or superheated steam) $x = -1$ must be entered as a pro-forma value. Here the backward functions will also result in $x = -1$.

Wet-steam region

When calculating wet steam, a value between 0 and 1 ($x = 0$ for saturated liquid, $x = 1$ for saturated steam) must be entered. In this case, the backward functions result in the appropriate value between 0 and 1 for x . It is adequate to enter either the given value for t and $p = -1000$, or the given value for p and $t = -1000$, plus the value for x between 0 and 1. When p and t and x are entered as given values, the program will consider p and t to be appropriate to represent the saturation-pressure curve. If it is not the case the calculation for the property of the chosen function to be calculated results in -1000 .

(Wet steam region of the LibO2: $t_t = 54.361\text{K}$ (-218.789°C) ... $p_t = 1.46\text{E-}03$ bar (t – triple point)
 $t_c = 154.581\text{K}$ (-118.569°C) ... $p_c = 50.43$ bar (c – critical point)

Note.

If the calculation results in -1000 , the values entered represent a state point beyond the range of validity.

2. Application of FluidEXL *Graphics* in Excel®

The FluidEXL *Graphics* Add-In has been developed to calculate thermodynamic properties in Excel® more conveniently. Within Excel®, it enables the direct call of functions relating to Water and Steam from the LibO2 property program library.

2.1 Installing FluidEXL *Graphics*

Complete the following steps for initial installation of FluidEXL *Graphics*.

Before you begin, it is best to uninstall any older version of FluidEXL *Graphics*.

The installation routine for 32-bit and 64-bit versions of Excel is similar. The following instructions are valid for both versions.

After you have downloaded and extracted the zip-file:

CD_FluidEXL_Graphics_LibO2_x64_Eng.zip (for 64 bit version)

or

CD_FluidEXL_Graphics_LibO2_Eng.zip" (for 32 bit version).

you will see the folder

\CD_FluidEXL_Graphics_LibO2_x64_Eng\ (for 64 bit version)

or

\CD_FluidEXL_Graphics_LibO2_Eng\ (for 32 bit version)

in your Windows Explorer, Total Commander etc.

Now, open this folder by double-clicking on it.

Within this folder you will see the following folders and files:

\FLUFT\
 \Formulation97\
 FluidEXL_Graphics_Eng.xla
 FluidEXL_Graphics_LibO2_Docu_Eng
 LC.dll
 LibO2.dll
 LibO2.chm
 Reg_.reg

Now, please copy the following folders and files

\FLUFT\
 \Formulation97\
 FluidEXL_Graphics_Eng.xla
 LibO2.dll
 LibO2.chm
 LC.dll

into the folder

C:\Users\[your name]\AppData\Roaming\Microsoft\AddIns\
 where [your name] is your name in the Windows system.

If this folder is not found, follow the next section anyway.

2.2 Registering FluidEXL *Graphics* as Add-In in Excel®

After installation in Windows®, FluidEXL *Graphics* must be registered in Excel® as an Add-In. To do this, start Excel® and carry out the following steps:

- Click the "File" button in the upper left hand corner of Excel® (see Fig. 2.1)

Figure 2.1: Registering FluidEXL *Graphics* as Add-In in Excel® 2016

- Click on the "Options" button in the menu which appears (see Fig. 2.2)

Figure 2.2: Registering FluidEXL *Graphics* as Add-In in Excel® 2016

- Click on "Add-Ins" in the next menu (Fig. 2.3)

Figure 2.3: Dialog window "Excel Options"

- Select "Excel Add-ins" next to "Manage:" in the lower area of the menu
- Then click the "Go..." button
- Click "Browse" in the following window (Fig. 2.4)

Figure 2.4: Dialog window "Add-ins"

- Excel opens the AddIns folder. This is usually
C:\Users\[your name]\AppData\Roaming\Microsoft\AddIns\.
- If the FluidEXL files have already been copied to this directory in section 2.1, please skip the following indented section. If not, follow the indented instructions to successful paste the needed files for the FluidEXL Add-In:

In the upper part of the "Browse" window the correct Add-In path is displayed (see Figure 2.5). Please note that not the entire path is displayed.

Figure 2.5: "Browse"-Window

Please copy this path and paste it into your file manager.

Now, please copy the following directories and files:

\FLUFT\
 \Formulation97\
 LC.dll
 FluidEXL_Graphics_Eng.xla
 LibO2.dll
 LibO2.chm

from the delivered CD-folder into this folder.

- Click "FluidEXL_Graphics_Eng.xla" in this folder (see Fig. 2.5) and click "OK."
- Now, "FluidEXL Graphics Eng" will be shown in the list of Add-ins (see Fig. 2.6).
(If a checkmark is in the box next to the name "FluidEXL Graphics Eng", this Add-In will automatically be loaded whenever Excel starts. This will continue to occur unless the checkmark is removed from the box by clicking on it.)
- In order to register the Add-In click the "OK" button in the "Add-ins" window (see Fig. 2.6).

Figure 2.6: Dialog window "Add-Ins"

In order to use FluidEXL *Graphics* in the following example, click on the menu item "Add-Ins" shown in Fig. 2.7.

Figure 2.7: Menu item "Add-Ins"

In the upper menu region of Excel®, the FluidEXL *Graphics* menu bar will appear as marked with the red circle in Fig. 2.8.

Figure 2.8: FluidEXL *Graphics* menu bar

The Installation of FluidEXL *Graphics* in Excel® is now complete.

An example calculation of "LibO2" DLL library property functions can be found in chapter 2.4.

2.3 Licensing the LibO2 Property LibO2rary

The licensing procedure has to be carried out when Excel® starts up and a FluidEXL *Graphics* prompt message appears. In this case, you will see the "License Information" window (see figure below).

Figure 2.12: "License Information" window

Here you will have to type in the license key. You can find contact information on the "Content" page of this User's Guide or by clicking the yellow question mark in the "License Information" window. Then the following window will appear:

Figure 2.13: "Help" window

If you do not enter a valid license it is still possible to start Excel® by clicking "Cancel" twice. In this case, the LibO2 property library will display the result "-11111111" for every calculation. The "License Information" window will appear every time you start Excel® unless you uninstall FluidEXLGraphics according to the description in section 2.6 of this User's Guide. Should you not wish to license the LibO2 property library, you have to delete the files

LibO2.dll
LibO2.chm

in the installation folder of FluidEXLGraphics (the standard being)

C:\Program Files\FluidEXL_Graphics_Eng
using an appropriate program such as Explorer® or Norton Commander.

Note:

The product name "LibO2_ _ _ _" in Figure 2.12 and 2.13 stands for the LibO2rary you are installing. In this case it is the LibO2 library.

2.4 Example calculation

Now we will calculate, step by step, the specific enthalpy h as a function of pressure p , temperature t , and vapor fraction x , using FluidEXL *Graphics*.

- Start Excel®
- Enter a value for p in bar in a cell
⇒ e. g.: Enter the value -30 into cell A2
- Enter a value for t in °C in a cell
⇒ e. g.: Enter the value 400 into cell B2
- Enter a value for x in kg saturated steam/kg wet steam in a cell

Since the wet steam region is calculated automatically by the subprograms, the following fixed details on the vapor fraction x are to be considered when the value for x is entered:

Single-phase region

If the state point to be calculated is located in the single-phase region (liquid or superheated steam) $x = -1$ must be entered as a pro-forma value.

Here the backward functions will also result in $x = -1$.

Wet-steam region

When calculating wet steam, a value between 0 and 1 ($x = 0$ for saturated liquid, $x = 1$ for saturated steam) must be entered. In this case, the backward functions result in the appropriate value between 0 and 1 for x . It is adequate to enter either the given value for t and $p = -1000$, or the given value for p and $t = -1000$, plus the value for x between 0 and 1. When p and t and x are entered as given values, the program will consider p and t to be appropriate to represent the saturation-pressure curve. If it is not the case the calculation for the property of the chosen function to be calculated results in -1000 .

⇒ e.g.: Enter -1 into the C2 cell.

- Click the cell in which the enthalpy h in kJ/kg is to be displayed.
⇒ e.g.: Click the D2 cell.
- Click "Calculate" in the menu bar of FluidEXL *Graphics*.
Now the "Insert Function" window appears (see next figure).

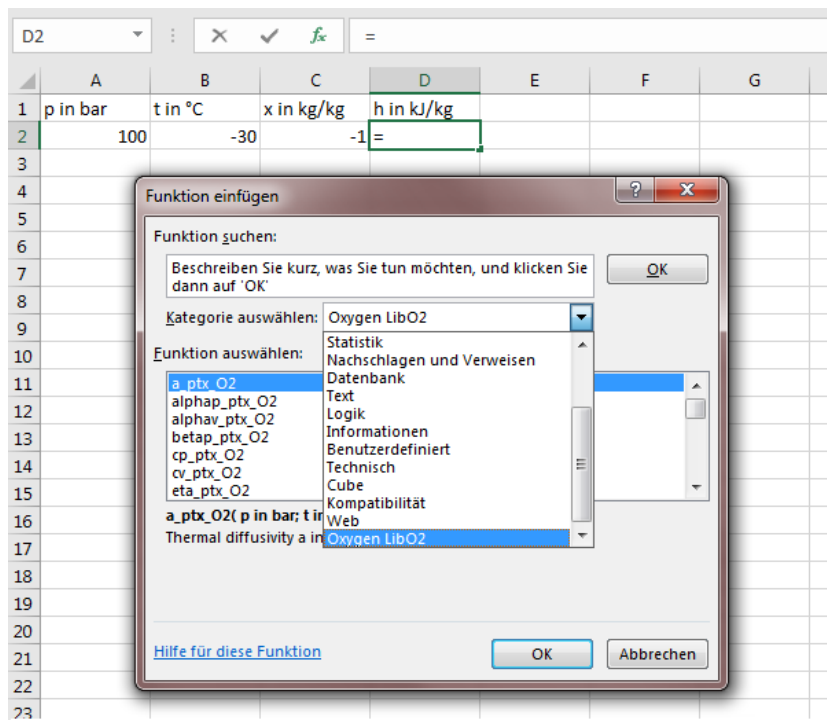

Figure 2.14: Choice of library and function name

- Search and click the "LibO2" library under "Or select a category:" in the upper part of the window.
- Search and click the h_ptx_O2 function under "Select a function:" right below.

Here it is possible to get more information on the range of validity, measuring units, error responses, etc. by clicking the "Help on this function" button.

- Click "OK".
The window shown in the next figure will now appear.

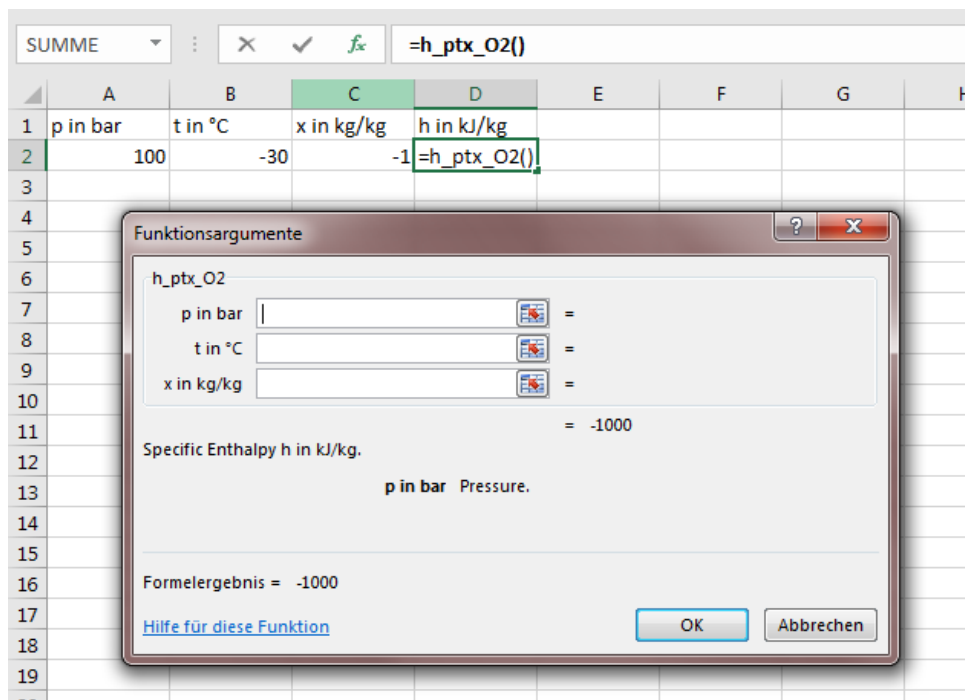

Figure 2.15: Input menu for the function

- The Cursor is now situated on the line next to "p in bar". You can now enter the value for p either by clicking the cell with the value for p , by entering the name of the cell with the value for p , or by entering the value for p directly.

⇒ e. g.: Click on the cell A2

- Situate the cursor next to "t in °C" and enter the value for t by clicking the cell with the value for t , by entering the name of the cell with the value for t , or by entering the value for t directly.

⇒ e. g.: Type B2 into the window next to "t in °C"

- Situate the cursor next to "x in kg/kg" and enter the value for x by clicking the cell with the value for x , by entering the name of the cell with the value for x , or by entering the value for x directly.

⇒ e. g.: Click on the cell C2

The window should now look like the following figure:

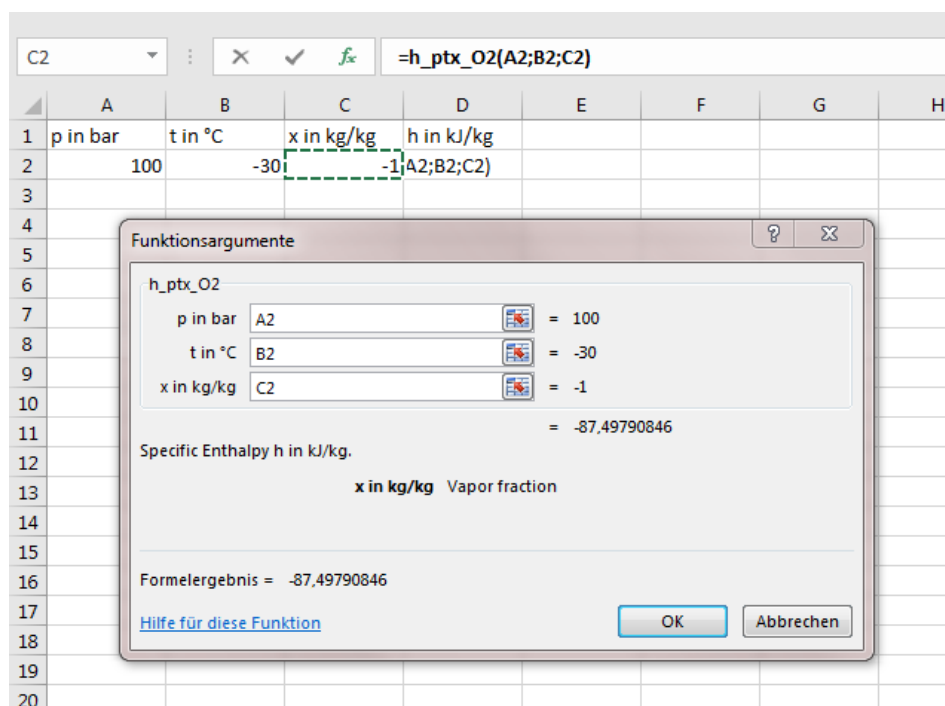

Figure 2.16: Input menu showing the result

- Click the "OK" button.

The result for h in kJ/kg appears in the cell selected above.

⇒ The result in our sample calculation here is: $h = -87.49790846$ in kJ/kg.

The calculation of $h = f(p, t, x)$ has thus been completed. Correspondingly, the specific entropy $s = f(p, t, x)$ can be calculated with the same values for p , t , and x .

- Click the cell in which the entropy s in kJ/(kg K) is to be displayed.

⇒ e.g.: Click the cell E2.

- Click "Calculate" in the menu bar of FluidEXL *Graphics*.
The "Insert Function" window will appear.
- Because of the previous calculation, the "LibO2" library under "Or select a category:" will be marked automatically.

- Search for and click on the s_ptx_O2 function under "Select a function:" in the center of the window.
- Click "OK".
The "Function Arguments" window appears.
- Enter the cell name with the value of p next to "p in bar", or click on the cell with the value of p .
- Situate the cursor next to "t in °C", click and enter the cell name with the value of t , or click on the cell with the value of t .
- Situate the cursor next to "x in kg/kg", click and enter the cell name with the value of x , or click on the cell with the value of x .
- Click "OK".

Note:

If the calculation results in -1 , this indicates that the entered values are located outside the range of validity. More detailed information on each function and its range of validity is available in chapter 3.

For further property functions calculable in FluidEXL *Graphics*, see the function table in Chapter 1.

Number Formats

When using FluidEXL *Graphics* you have the option of choosing special number formats in advance.

Changes can be made as follows:

- Click the cell or select and click on the cells you wish to format.
(In empty cells the new format will be applied once a value has been entered.)
- Click "Number Format" in the FluidEXL *Graphics* menu bar.
- Select the desired number format in the dialog box which appears:
 - "STD – Standard": Insignificant zeros behind the decimal point are not shown.
 - "FIX – Fixed Number of Digits": All set decimal places are shown, including insignificant zeros.
 - "SCI – Scientific Format": Numbers are always shown in the exponential form with the set number of decimal places.
- Set the "Number of decimal places" by entering the number into the appropriate window.
- Confirm this by clicking the "OK" button.

As an example, the table below shows the three formats for the number 1.230 adjusted for three decimal places:

STD	1.23
FIX	1.230
SCI	1.230E+00

This formatting can also be applied to cells which have already been calculated.

2.5 The FluidEXL *Graphics* Help System

As mentioned earlier, FluidEXL *Graphics* also provides detailed help functions.

Information on individual property functions may be accessed via the following steps:

- Click "Calculate" in the FluidEXL *Graphics* menu bar.
- Click on the "LibO2" library under "Or select a category:" in the "Insert Function" window which will appear.
- Click the "Help on this function" button in the lower left-hand edge of the "Insert Function" window.

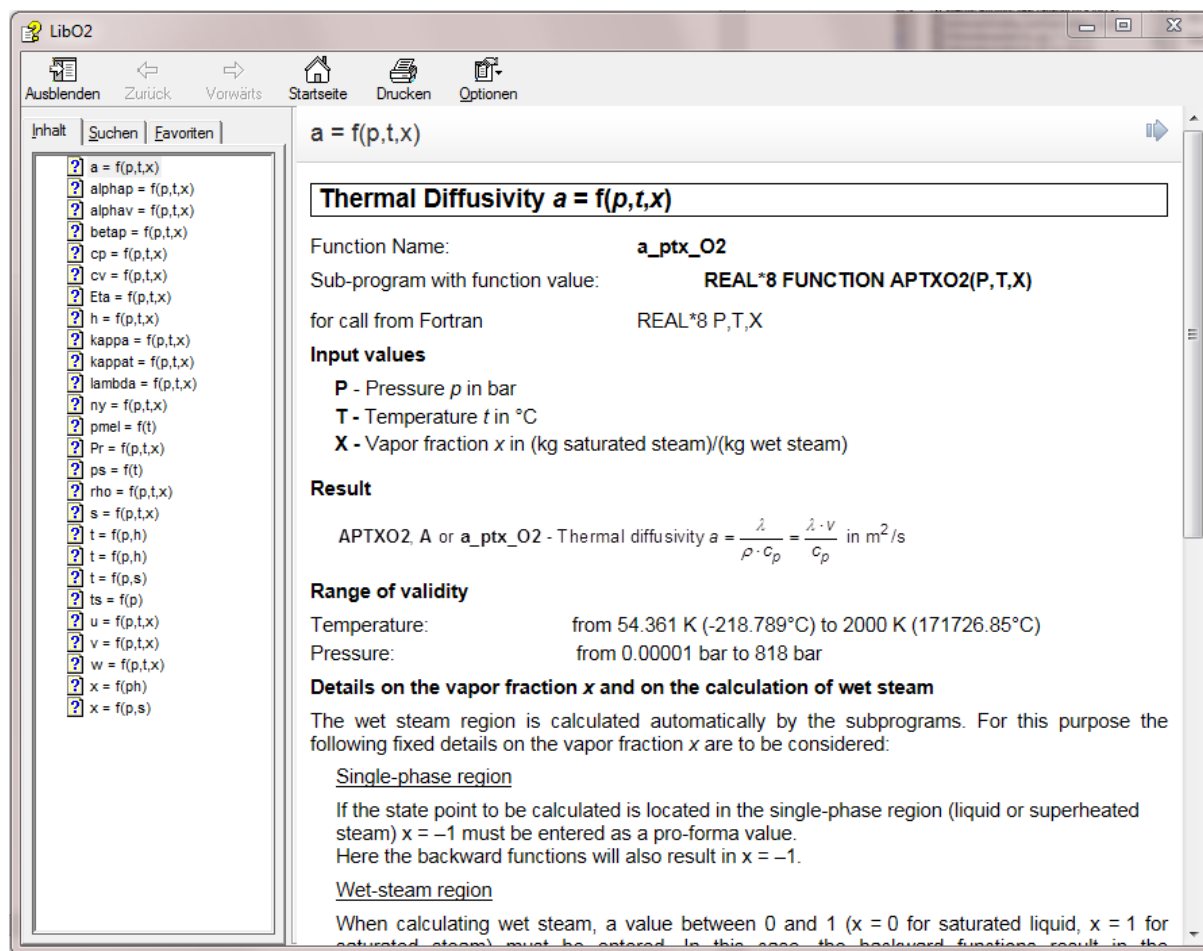

Figure 2.17: Help Window

If the LibO2.chm function help cannot be found, you will be redirected to a Microsoft® help website by your standard browser. In this case, the LibO2.chm file has to be copied into the folder of FluidEXL *Graphics*, in the standard case

C:\Program Files\FluidEXL_Graphics_Eng

to use the help system.

2.6 Removing FluidEXLGraphics

2.6.1 Removing LibO2 Library

Should you wish to remove only the LibO2 library, delete the files

LibO2.dll
LibO2.chm

in the directory selected for the installation of FluidEXL *Graphics*, in the standard case,

C:\Program Files\FluidEXL_Graphics_Eng

by using an appropriate program such as Explorer® or Norton Commander.

2.6.2 Unregistering and uninstalling FluidEXL *Graphics* as Add-In in versions of Excel® from 2007 onwards (for earlier versions see 2.6.3)

In order to unregister the FluidEXL *Graphics* Add-In in versions of Excel® from 2007 onwards start Excel® and carry out the following commands:

- Click the "File" button in the upper left corner of Excel®
- Click on the "Options" button in the menu which appears

Figure 2.18: Unregistering FluidEXL *Graphics* as Add-In in Excel® 2016

Figure 2.19 Unregistering FluidEXL *Graphics* as Add-In in Excel® 2016

- Click on "Add-Ins" in the next menu (Figure 2.20)

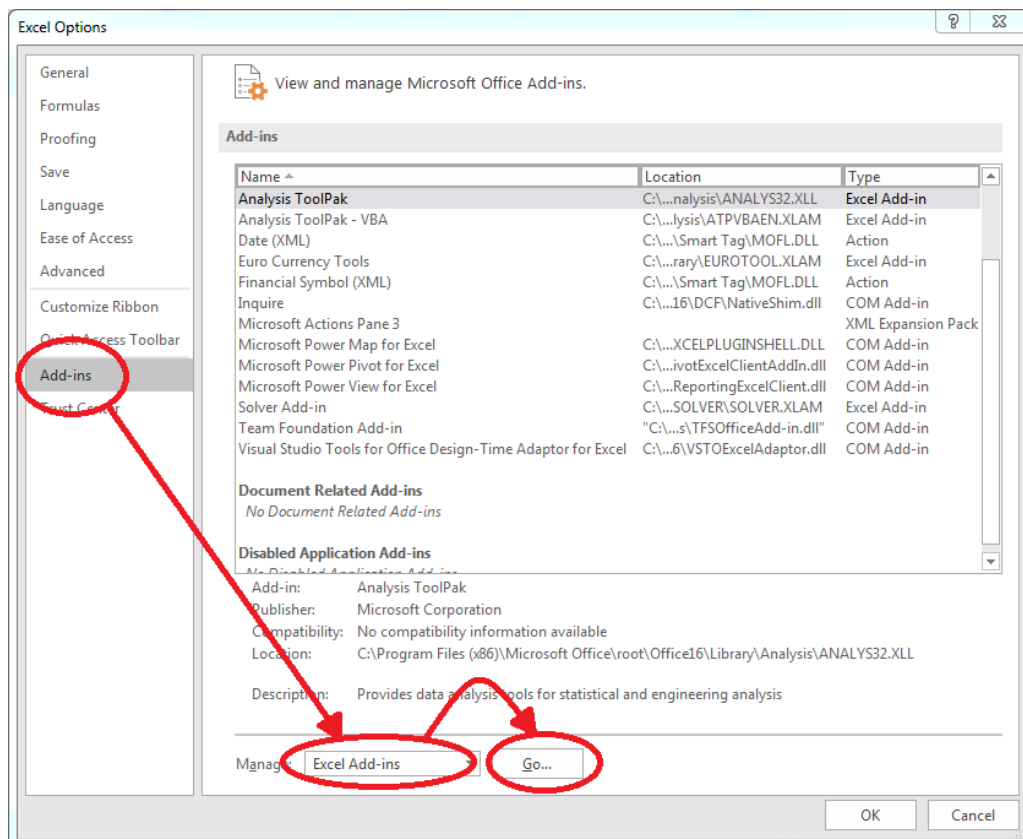

Figure 2.20: Dialog window "Add-Ins"

- If it is not shown in the list automatically, chose and click "Excel Add-ins" next to "Manage:" in the lower area of the menu

- Afterwards click the "Go..." button
- Remove the checkmark in front of "FluidEXL Graphics Eng" in the window which now appears. Click the "OK" button to confirm your entry.

Figure 2.21: Dialog window "Add-Ins"

In order to remove FluidEXL *Graphics* from Windows and the hard drive, click "Start" in the Windows task bar, select "Settings" and click "Control Panel."

Now, double click on "Add or Remove Programs."

In the list box of the "Add or Remove Programs" window that appears, select "FluidEXL Graphics Eng"

by clicking on it and then clicking the "Add/Remove..." button.

Click "Automatic" in the following dialog box and then the "Next >" button.

Click "Finish" in the "Perform Uninstall" window.

Answer the question of whether all shared components should be removed with "Yes to All." Finally, close the "Add or Remove Programs" and "Control Panel" windows.

Now FluidEXL *Graphics* has been completely removed from your computer.

2.6.3 Unregistering and uninstalling FluidEXL *Graphics* as Add-In in Excel®, versions 2003 or earlier

To remove FluidEXL *Graphics* completely, proceed as follows: First the registration of FluidEXL_Graphics_Eng.xla has to be cancelled in Excel®.

In order to do this, click "Tools" in the upper menu bar of Excel® and here "Add-Ins...". Untick the box on the left-hand side of

"FluidEXL Graphics Eng"

in the window that appears and click the "OK" button. The additional menu bar of FluidEXL *Graphics* disappears from the upper part of the Excel® window. Afterwards, we

recommend closing Excel®.

If the FluidEXL *Graphics* menu bar does not disappear, take the following steps:

Click "View" in the upper menu bar of Excel®, then "Toolbars" and then "Customize..." in the list box which appears.

"FluidEXL Graphics Eng"

is situated at the bottom of the "Toolbars" entries, which must be selected by clicking on it. Delete the entry by clicking "Delete". You will be asked whether you really want to delete the toolbar – click "OK".

Within the next step delete the files

LibO2.dll

LibO2.chm

in the directory selected for the installation of FluidEXL *Graphics*, in the standard case,

C:\Program Files\FuildEXL_Graphics_Eng

using an appropriate program such as Explorer® or Norton Commander.

In order to remove FluidEXL *Graphics* from Windows and the hard drive, click "Start" in the Windows task bar, select "Settings" and click "Control Panel". Now double-click on "Add or Remove Programs". In the list box of the "Add/Remove Programs" window that appears select

"FluidEXL Graphics Eng"

by clicking on it and click the "Add/Remove..." button. In the following dialog box, click "Automatic" and then "Next >". Click "Finish" in the "Perform Uninstall" window. Answer the question whether all shared components shall be removed with "Yes to All". Finally, close the "Add/Remove Programs" and "Control Panel" windows.

Now FluidEXL *Graphics* has been removed.

3. Program Documentation

Thermal Diffusivity $a = f(p, t, x)$

Function Name: **a_ptx_O2**
 Sub-program with function value: **REAL*8 FUNCTION APTXO2(P,T,X)**
 for call from Fortran **REAL*8 P,T,X**

Input values

P - Pressure p in bar
T - Temperature t in °C
X - Vapor fraction x in (kg saturated steam)/(kg wet steam)

Result

APTXO2, A or a_ptx_O2 - Thermal diffusivity $a = \frac{\lambda}{\rho \cdot c_p} = \frac{\lambda \cdot v}{c_p}$ in m²/s

Range of validity

Temperature: from 54.361 K (-218.789°C) to 2000 K (1726.85°C)
 Pressure: from 0.00001 bar to 818 bar

Details on the vapor fraction x and on the calculation of wet steam

The wet steam region is calculated automatically by the subprograms. For this purpose the following fixed details on the vapor fraction x are to be considered:

Single-phase region

If the state point to be calculated is located in the single-phase region (liquid or superheated steam) $x = -1$ must be entered as a pro-forma value.
 Here the backward functions will also result in $x = -1$.

Wet-steam region

When calculating wet steam, a value between 0 and 1 ($x = 0$ for saturated liquid, $x = 1$ for saturated steam) must be entered. In this case, the backward functions result in the appropriate value between 0 and 1 for x . It is adequate to enter either the given value for t and $p = -1000$, or the given value for p and $t = -1000$, plus the value for x between 0 and 1. When p and t and x are entered as given values, the program will consider p and t to be appropriate to represent the saturation-pressure curve. If it is not the case the calculation for the property of the chosen function to be calculated results in -1000 .

(Wet steam region of LibO2: $t_t = -218.789$ °C ... $p_t = 0.12523$ bar (t – triple point)
 $t_c = -118.569$ °C ... $p_c = 50.43$ bar (c – critical point)

Results for wrong input values

Result **APTXO2, A = -1** or **a_ptx_O2 = -1000** for input values:

Single phase region: $p > 818$ bar or $p < 0.00001$ bar or
 ($x = -1$) $t > 1726.85$ °C or $t < -118.569$ °C or $t < t_{\text{mel}}(p)$

Saturation lines: at $p = -1000$ and $t > -118.569$ °C or $t < -218.789$ °C
 ($x = 0$ or $x = 1$) at $t = -1000$ and $p > 50.43$ bar or $p < 0.00001$ bar or
 at $p < 50.43$ bar or $p > 0.00001$ bar
 and $|t - t_s(p)| > 0.1$ K

Relative Pressure Coefficient $\alpha_p = f(p, t, x)$

Function Name: **ALPHAP_ptx_O2**
 Sub-program with function value: **REAL*8 FUNCTION ALPHAPPTXO2(P,T,X)**
 for call from Fortran **REAL*8 P,T,X**

Input values

P - Pressure p in bar
T - Temperature t in °C
X - Vapor fraction x in (kg saturated steam)/(kg wet steam)

Result

ALPHAPPTXO2, ALPHAP or alphap_ptx_O2 - Relative pressure coefficient α_p in 1/K

Range of validity

Temperature: from 54.361 K (-218.789°C) to 2000 K (1726.85°C)
 Pressure: from 0.00001 bar to 818 bar

Details on the vapor fraction x and on the calculation of wet steam

The wet steam region is calculated automatically by the subprograms. For this purpose the following fixed details on the vapor fraction x are to be considered:

Single-phase region

If the state point to be calculated is located in the single-phase region (liquid or superheated steam) $x = -1$ must be entered as a pro-forma value.
 Here the backward functions will also result in $x = -1$.

Wet-steam region

When calculating wet steam, a value between 0 and 1 ($x = 0$ for saturated liquid, $x = 1$ for saturated steam) must be entered. In this case, the backward functions result in the appropriate value between 0 and 1 for x . It is adequate to enter either the given value for t and $p = -1000$, or the given value for p and $t = -1000$, plus the value for x between 0 and 1. When p and t and x are entered as given values, the program will consider p and t to be appropriate to represent the saturation-pressure curve. If it is not the case the calculation for the property of the chosen function to be calculated results in -1000 .

(Wet steam region of LibO2: $t_t = -218.789$ °C ... $p_t = 0.12523$ bar (t – triple point)
 $t_c = -118.569$ °C ... $p_c = 50.43$ bar (c – critical point)

Results for wrong input values

Result **ALPHAPPTXO2, ALPHAP = -1000 or alphap_ptx_O2 = -1000** for input values:

Single phase region: $p > 818$ bar or $p < 0.00001$ bar or
 ($x = -1$) $t > 1726.85$ °C or $t < -118.569$ °C or $t < t_{\text{mel}}(p)$

Saturation lines: at $p = -1000$ and $t > -118.569$ °C or $t < -218.789$ °C
 ($x = 0$ or $x = 1$) at $t = -1000$ and $p > 50.43$ bar or $p < 0.00001$ bar or
 at $p < 50.43$ bar or $p > 0.00001$ bar
 and $|t - t_s(p)| > 0.1$ K

 Pressure: from 0.00001 bar to 818 bar

Details on the vapor fraction x and on the calculation of wet steam

The wet steam region is calculated automatically by the subprograms. For this purpose the following fixed details on the vapor fraction x are to be considered:

Single-phase region

If the state point to be calculated is located in the single-phase region (liquid or superheated steam) $x = -1$ must be entered as a pro-forma value.

Here the backward functions will also result in $x = -1$.

Wet-steam region

When calculating wet steam, a value between 0 and 1 ($x = 0$ for saturated liquid, $x = 1$ for saturated steam) must be entered. In this case, the backward functions result in the appropriate value between 0 and 1 for x . It is adequate to enter either the given value for t and $p = -1000$, or the given value for p and $t = -1000$, plus the value for x between 0 and 1. When p and t and x are entered as given values, the program will consider p and t to be appropriate to represent the saturation-pressure curve. If it is not the case the calculation for the property of the chosen function to be calculated results in -1000 .

(Wet steam region of LibO2: $t_t = -218.789\text{ °C}$... $p_t = 0.12523\text{ bar}$ (t – triple point)
 $t_c = -118.569\text{ °C}$... $p_c = 50.43\text{ bar}$ (c – critical point))

Results for wrong input values

Result **LAMPTXO2, LAMBDA = -1000** or **lambda_ptx_O2 = -1000** for input values:

Single phase region: $p > 818\text{ bar}$ or $p < 0.00001\text{ bar}$ or
 ($x = -1$) $t > 1726.85\text{ °C}$ or $t < -118.569\text{ °C}$ or $t < t_{\text{mel}}(p)$

Saturation lines: at $p = -1000$ and $t > -118.569\text{ °C}$ or $t < -218.789\text{ °C}$
 ($x = 0$ or $x = 1$) at $t = -1000$ and $p > 50.43\text{ bar}$ or $p < 0.00001\text{ bar}$ or
 at $p < 50.43\text{ bar}$ or $p > 0.00001\text{ bar}$
 and $|t - t_s(p)| > 0.1\text{ K}$

Kinematic Viscosity $\nu = f(p, t, x)$

Function Name: **Ny_ptx_O2**
 Sub-program with function value: **REAL*8 FUNCTION NYPTXO2(P,T,X)**
 for call from Fortran **REAL*8 P,T,X**

Input values

P - Pressure p in bar
T - Temperature t in °C
X - Vapor fraction x in (kg saturated steam)/(kg wet steam)

Result

NYPTXO2, NY or ny_ptx_O2 - Kinematic viscosity $\nu = \frac{\eta}{\rho} = \eta \cdot \nu$ in m^2 / s

Range of validity

Temperature: from 54.361 K (-218.789°C) to 2000 K (1726.85°C)
 Pressure: from 0.00001 bar to 818 bar

- X** - Vapor fraction x in (kg saturated steam)/(kg wet steam)

Result

WPTXO2, W or **w_ptx_O2** - Isentropic speed of sound w in m/s

Range of validity

Temperature: from 54.361 K (-218.789°C) to 2000 K (1726.85°C)
 Pressure: from 0.00001 bar to 818 bar

Details on the vapor fraction x and on the calculation of wet steam

The wet steam region is calculated automatically by the subprograms. For this purpose the following fixed details on the vapor fraction x are to be considered:

Single-phase region

If the state point to be calculated is located in the single-phase region (liquid or superheated steam) $x = -1$ must be entered as a pro-forma value.

Here the backward functions will also result in $x = -1$.

Wet-steam region

When calculating wet steam, a value between 0 and 1 ($x = 0$ for saturated liquid, $x = 1$ for saturated steam) must be entered. In this case, the backward functions result in the appropriate value between 0 and 1 for x . It is adequate to enter either the given value for t and $p = -1000$, or the given value for p and $t = -1000$, plus the value for x between 0 and 1. When p and t are entered as given values, the program will consider p and t to be appropriate to represent the saturation-pressure curve. If it is not the case the calculation for the property of the chosen function to be calculated results in -1000 .

(Wet steam region of LibO2: $t_t = -218.789\text{ °C}$... $p_t = 0.12523\text{ bar}$ (t – triple point)
 $t_c = -118.569\text{ °C}$... $p_c = 50.43\text{ bar}$ (c – critical point))

Results for wrong input values

Result **WPTXO2, W = -1000** or **w_ptx_O2 = -1000** for input values:

Single phase region: $p > 818\text{ bar}$ or $p < 0.00001\text{ bar}$ or
 ($x = -1$) $t > 1726.85\text{ °C}$ or $t < -118.569\text{ °C}$ or $t < t_{\text{mel}}(p)$

Saturation lines: at $p = -1000$ and $t > -118.569\text{ °C}$ or $t < -218.789\text{ °C}$
 ($x = 0$ or $x = 1$) at $t = -1000$ and $p > 50.43\text{ bar}$ or $p < 0.00001\text{ bar}$ or
 at $p < 50.43\text{ bar}$ or $p > 0.00001\text{ bar}$
 and $|t - t_s(p)| > 0.1\text{ K}$

References: [1], [2]

Backward Function: Vapor Fraction $x = f(p, h)$

Function Name: **x_ph_O2**
 Sub-program with function value: **REAL*8 FUNCTION XPHO2(P,H)**
 for call from Fortran **REAL*8 P,H**

Input values

P - Pressure p in bar
H - Specific enthalpy h in kJ/kg

Result

XPHO2, X or **x_ph_O2** - Vapor fraction x in (kg saturated steam)/(kg wet steam)

Range of validity

Temperature: from 54.361 K (-218.789°C) to 2000 K (1726.85°C)
 Pressure: from 0.00001 bar to 818 bar

Details on the calculation of wet steam

The wet steam region is calculated automatically. That means the given values of p and h are taken as a basis and the subprogram will determine whether the state point to be calculated is located within the single-phase region (liquid or steam) or the wet steam region. When calculating wet steam the value for x has to be calculated. If the state point to be calculated is located in the single-phase region $x = -1$ has to be entered.

Results for wrong input values

Result **XPHO2, X = -1** or **x_ph_O2 = -1** for input values:
 if the state point is located in the single phase region
 $p > 50.43$ bar or $p < 0.00001$ bar

References: [1], [2]

Backward Function: Vapor Fraction $x = f(p,s)$

Function Name: **x_ps_O2**
 Sub-program with function value: **REAL*8 FUNCTION XPSO2(P,S)**
 for call from Fortran **REAL*8 P,S**

Input values

P - Pressure p in bar
S - Specific entropy s in kJ/kg K

Result

XPSO2, X or **x_ps_O2** - Vapor fraction x in (kg saturated steam)/(kg wet steam)

Range of validity

Temperature: from 54.361 K (-218.789°C) to 2000 K (1726.85°C)
 Pressure: from 0.00001 bar to 818 bar

Details on the calculation of wet steam

The wet steam region is calculated automatically. That means the given values of p and h are taken as a basis and the subprogram will determine whether the state point to be calculated is located within the single-phase region (liquid or steam) or the wet steam region. When calculating wet steam the value for x has to be calculated. If the state point to be calculated is located in the single-phase region $x = -1$ has to be entered.

Results for wrong input values

Result **XPSO2, X = -1** or **x_ps_O2 = -1** for input values:
 if the state point is located in the single phase region
 $p > 50.43$ bar or $p < 0.00001$ bar

References: [1], [2]

Compression factor $z = f(p, t, x)$

Function Name: **z_ptx_O2**
 Sub-program with function value: **REAL*8 FUNCTION ZPTXO2(P,T,X)**
 for call from Fortran **REAL*8 P,T,X**

Input values

P - Pressure p in bar
T - Temperature t in °C
X - Vapor fraction x in (kg saturated steam)/(kg wet steam)

Result

ZPTXO2, Z or z_ptx_O2 - Isentropic speed of sound w in m/s

Range of validity

Temperature: from 54.361 K (-218.789°C) to 2000 K (1726.85°C)
 Pressure: from 0.00001 bar to 818 bar

Details on the vapor fraction x and on the calculation of wet steam

The wet steam region is calculated automatically by the subprograms. For this purpose the following fixed details on the vapor fraction x are to be considered:

Single-phase region

If the state point to be calculated is located in the single-phase region (liquid or superheated steam) $x = -1$ must be entered as a pro-forma value.

Here the backward functions will also result in $x = -1$.

Wet-steam region

When calculating wet steam, a value between 0 and 1 ($x = 0$ for saturated liquid, $x = 1$ for saturated steam) must be entered. In this case, the backward functions result in the appropriate value between 0 and 1 for x . It is adequate to enter either the given value for t and $p = -1000$, or the given value for p and $t = -1000$, plus the value for x between 0 and 1. When p and t are entered as given values, the program will consider p and t to be appropriate to represent the saturation-pressure curve. If it is not the case the calculation for the property of the chosen function to be calculated results in -1000 .

(Wet steam region of LibO2: $t_t = -218.789\text{ °C}$... $p_t = 0.12523\text{ bar}$ (t – triple point)
 $t_c = -118.569\text{ °C}$... $p_c = 50.43\text{ bar}$ (c – critical point))

Results for wrong input values

Result **ZPTXO2, Z = -1000** or **z_ptx_O2 = -1000** for input values:

Single phase region: $p > 818\text{ bar}$ or $p < 0.00001\text{ bar}$ or
 ($x = -1$) $t > 1726.85\text{ °C}$ or $t < -118.569\text{ °C}$ or $t < t_{\text{mel}}(p)$

Saturation lines: at $p = -1000$ and $t > -118.569\text{ °C}$ or $t < -218.789\text{ °C}$
 ($x = 0$ or $x = 1$) at $t = -1000$ and $p > 50.43\text{ bar}$ or $p < 0.00001\text{ bar}$ or
 at $p < 50.43\text{ bar}$ or $p > 0.00001\text{ bar}$
 and $|t - t_s(p)| > 0.1\text{ K}$
