0. Package Contents

0.1 Zip file for 32-bit MATLAB®

The following zip file is delivered for your computer running a 32-bit version of MATLAB®.

"CD_FluidLAB_LibH2.zip"

Including the following files:

FluidLAB_LibH2_Setup.exe	- Installation program for the FluidLAB Add-On for use in MATLAB®
LibH2.dll	- Dynamic Link Library for hydrogen for use in MATLAB®
FluidLAB_LibH2_Docu_Eng.pdf	- User's Guide

0.2 Zip file for 64-bit MATLAB®

The following zip file is delivered for your computer running a 64-bit version of MATLAB®.

"CD_FluidLAB_LibH2_x64.zip"

Including the following files and folders:

Files:

Setup.exe	- Self-extracting and self-installing program for FluidLAB
FluidLAB_LibH2_64.msi	- Installation program for the FluidLAB Add-On for use in MATLAB®
LibH2.dll	- Dynamic Link Library for hydrogen for use in MATLAB®
FluidLAB_LibH2_Docu_Eng.pdf	- User's Guide

Folders:

vcredist_x64	- Folder containing the "Microsoft Visual C++ 2010 x64 Redistributable Pack"
WindowsInstaller3_1	- Folder containing the "Microsoft Windows Installer"

1. Property Functions

Functional Dependence	Function Name	Call from Fortran program	Call in DLL LibH2 as parameter	Property or Function	Unit of the result
$a = f(p, t, x, NP)$	a_ptx_H2	APTXH2(P, T, X, NP)	C_APTXH2(A, P, T, X, NP)	Thermal diffusivity	m ² /s
$c_p = f(p, t, x, NP)$	cp_ptx_H2	CPPTXH2(P, T, X, NP)	C_CPPTXH2(CP, P, T, X, NP)	Specific isobaric heat capacity	kJ/(kg K)
$c_v = f(p, t, x, NP)$	cp_ptx_H2	CVPTXH2(P, T, X, NP)	C_CVPTXH2(CV, P, T, X, NP)	Specific isochoric heat capacity	kJ/(kg K)
$\eta = f(p, t, x, NP)$	eta_ptx_H2	ETAPTXH2(P, T, X, NP)	C_ETAPTXH2(ETA, P, T, X, NP)	Dynamic viscosity	Pa s
$h = f(p, t, x, NP)$	h_ptx_H2	HPTXH2(P, T, X, NP)	C_HPTXH2(H, P, T, X, NP)	Specific enthalpy	kJ/kg
$\kappa = f(p, t, x, NP)$	kappa_ptx_H2	KAPPTXH2(P, T, X, NP)	C_KAPPTXH2(KAP, P, T, X, NP)	Isentropic exponent	-
$\lambda = f(p, t, x, NP)$	lambda_ptx_H2	LAMPTXH2(P, T, X, NP)	C_LAMPTXH2(LAM, P, T, X, NP)	Thermal conductivity	W/(m K)
$\nu = f(p, t, x, NP)$	ny_ptx_H2	NYPTXH2(P, T, X, NP)	C_NYPTXH2(NY, P, T, X, NP)	Kinematic viscosity	m ² /s
$p_{mel} = f(t, NP)$	pmel_t_H2	PMELTH2(T, NP)	C_PMELTH2(PMEL, T, NP)	Melting pressure from temperature	bar
$p_s = f(t, NP)$	ps_t_H2	PSTH2(T, NP)	C_PSTH2(PS, T, NP)	Vapor pressure from temperature	bar
$Pr = f(p, t, x, NP)$	Pr_ptx_H2	PRPTXH2(P, T, X, NP)	C_PRPTXH2(PR, P, T, X, NP)	<i>Prandtl</i> -Number	-
$\rho = f(p, t, x, NP)$	rho_ptx_H2	RHOPTXH2(P, T, X, NP)	C_RHOPTXH2(RHO, P, T, X, NP)	Density	kg/m ³
$s = f(p, t, x, NP)$	s_ptx_H2	SPTXH2(P, T, X, NP)	C_SPTXH2(S, P, T, X, NP)	Specific entropy	kJ/(kg K)
$t = f(p, h, NP)$	t_ph_H2	TPHH2(P, H, NP)	C_TPHH2(T, P, H, NP)	Backward function: Temperature from pressure and enthalpy	°C
$t = f(p, s, NP)$	t_ps_H2	TPSH2(P, S, NP)	C_TPSH2(T, P, S, NP)	Backward function: Temperature from pressure and entropy	°C
$t_{mel} = f(p, NP)$	tmel_p_H2	TMELPH2(P, NP)	C_TMELPH2(TMEL, P, NP)	Melting temperature from pressure	°C
$t_s = f(p, NP)$	ts_p_H2	TSPH2(P, NP)	C_TSPH2(TS, P, NP)	Boiling temperature from pressure	°C
$u = f(p, t, x, NP)$	u_ptx_H2	UPTXH2(P, T, X, NP)	C_UPTXH2(U, P, T, X, NP)	Internal energy	kJ/kg
$v = f(p, t, x, NP)$	v_ptx_H2	VPTXH2(P, T, X, NP)	C_VPTXH2(V, P, T, X, NP)	Specific volume	m ³ /kg
$w = f(p, t, x, NP)$	w_ptx_H2	WPTXH2(P, T, X, NP)	C_WPTXH2(W, P, T, X, NP)	Isentropic speed of sound	m/s ²
$x = f(p, h, NP)$	x_ph_H2	XPHH2(P, H, NP)	C_XPHH2(X, P, H, NP)	Backward function: Vapor fraction from pressure and enthalpy	kg/kg
$x = f(p, s, NP)$	x_ps_H2	XPSH2(P, S, NP)	C_XPSH2(X, P, S, NP)	Backward function: Vapor fraction from pressure and entropy	kg/kg

Range of validity

Temperature range:

H₂-Para (NP = 0):

from $t_{\text{mel}}(p)$ or $t_{\text{min}} = t(p, \rho_{\text{max}})$ to 126.85 °C at $p \geq p_t = 0.0703991859$ bar,

with $\rho_{\text{max}} = 44.0$ mol/l ($v_{\text{min}} = 0.0112737843$ m³/kg)

from $t_{\text{trip}} = -259.35$ °C to 126.85 °C at $p \leq p_t = 0.0703991859$ bar

H₂-Normal (NP = 1):

from $t_{\text{mel}}(p)$ or $t_{\text{min}} = t(p, \rho_{\text{max}})$ to 126.85 °C at $p \geq p_t = 0.0770478607$ bar,

with $\rho_{\text{max}} = 38.148$ mol/l ($v_{\text{min}} = 0.0130032114$ m³/kg)

from $t_{\text{trip}} = -259.193$ °C to 126.85 °C at $p \leq p_t = 0.0770478607$ bar

Pressure range: from 0.001 bar to 1210 bar

Specifications for calculating the state variables of hydrogen

The calculation of the state variables of H₂-Normal und H₂-Para is based upon the following approximations:

- The specific volume $v = f(p, t)$ for H₂-Normal is also calculated according to the equation of H₂-Para from Younglove [22].
- The equation of vapor pressure from Lemmon [24] for H₂-Para is also used for H₂-Normal.
- The same critical point is taken for H₂-Normal and H₂-Para: $p_c = 12.837878$ bar, $t_c = -240.212$ °C.
- An equation of the melting pressure $p_{\text{mel}} = f(t)$ for H₂-Normal does not exist. The calculable range of state of H₂-Normal is determined by the maximum molar density $\rho_{\text{max}} = 38.148$ mol/l. This corresponds to a minimum specific volume of $v_{\text{min}} = 0.01300321$ m³/kg.
- The range of validity of the equation of state of H₂-Para is confined by the maximum molar density $\rho_{\text{max}} = 44.0$ mol/l. This corresponds to a minimum specific volume of $v_{\text{min}} = 0.0112737843$ m³/kg.

The calculation of the state variables H₂-Normal and H₂-Para varies only in the different equations of the isobaric heat capacity of the ideal gas.

Reference state

$h = 0$ and $s = 0$

at $p = 1.01325$ bar

and $t = -252.8731$ °C

Hint!

If the calculation results in -1000 , the values entered represent a state point beyond the range of validity of LibH2. For further information on each function and its range of validity see Chapter 3. The same information may also be accessed via the online help pages.

2 Application of FluidLAB in MATLAB

The FluidLAB Add-In has been developed to calculate thermodynamic properties in MATLAB®. Within FluidLAB, it enables the direct call of functions relating to hydrogen from the LibH2 property library.

2.1 Installing FluidLAB

Installing FluidLAB including LibH2 for 32-bit MATLAB®

This section describes the installation of FluidLAB LibH2 for a 32-bit version of MATLAB®. Before you begin, it is best to close any Windows® applications, since Windows® may need to be rebooted during the installation process.

After you have downloaded and extracted the zip-file "CD_FluidLAB_LibH2.zip", you will see the folder

CD_FluidLAB_LibH2

in your Windows Explorer®, Norton Commander® or another similar program you are using.

Open this folder by double-clicking on it.

In this folder you will see the following files:

FluidLAB_LibH2_Docu_Eng.pdf
FluidLAB_LibH2_Setup.exe
LibH2.dll.

In order to run the installation of FluidLAB including, the LibH2 property library, double-click on the file

FluidLAB_LibH2_Setup.exe.

Installation may start with a window noting that all Windows® programs should be closed. When this is the case, the installation can be continued. Click the "Next >" button.

In the following dialog box, "Destination Location", the default path offered automatically for the installation of FluidLAB is

C:\Program Files\FuildLAB\LibH2	(for English version of Windows)
C:\Programme\FuildLAB\LibH2	(for German version of Windows).

By clicking the "Browse..." button, you can change the installation directory before installation (see Figure 2.1).

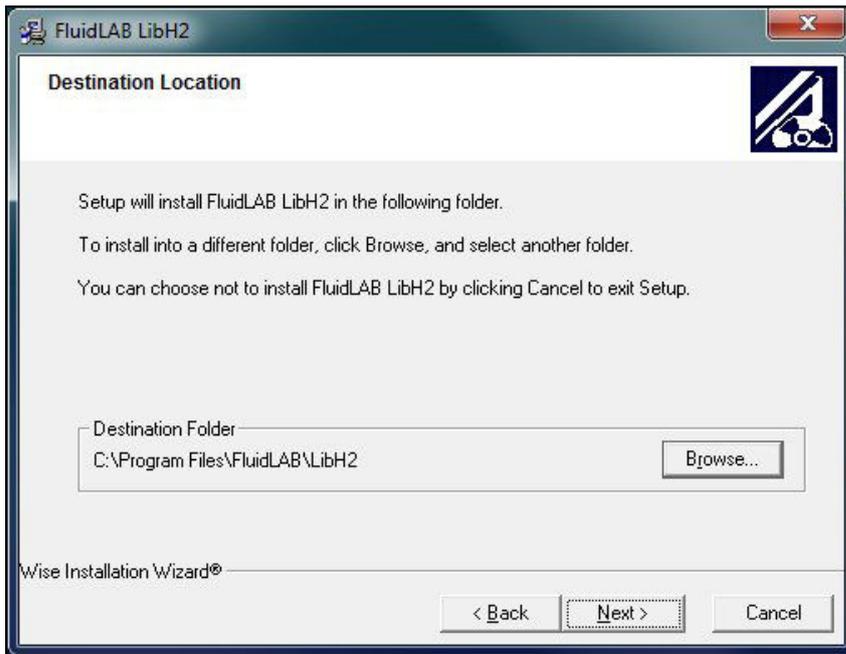

Figure 2.1: "Destination Location"

If you wish to change directories, click the "Browse..." button and select your desired directory. The instructions in this documentation refer to the stated default directory. Leave this window by clicking the "Next >" button.

The dialog window "Start Installation" appears. Click the "Next >" button to continue installation. The FluidLAB files are now being copied into the created directory on your hard drive. Click the "Finish >" button in the following window to complete installation.

The installation program has copied the following files:

capt_ico_big.ico	LC.dll
libifcoremd.dll	limmd.dll
libiomp5md.dll	LibH2.dll

for LibH2 into the directory

"C:\Program Files\FuildLAB\LibH2"	(for English version of Windows)
"C:\Programme\FuildLAB\LibH2"	(for German version of Windows)

Now, you have to overwrite the file "LibH2.dll" in your FluidLAB directory with the file of the same name provided on your CD with FluidLAB.

To do this, open the CD in "My Computer" and click on the file "LibH2.dll" in order to highlight it.

Then click on the "Edit" menu in your Explorer and select "Copy".

Now, open your FluidLAB directory (the standard being

C:\Program Files\FuildLAB\LibH2	(for English version of Windows)
C:\Programme\FuildLAB\LibH2	(for German version of Windows))

and insert the file "LibH2.dll" by clicking the "Edit" menu in your Explorer and then select "Paste". Answer the question whether you want to replace the file by clicking the "Yes" button. Now, you have overwritten the file "LibH2.dll" successfully and the property functions are available in MATLAB.

Installing FluidLAB including LibH2 for 64-bit MATLAB®

This section describes the installation of FluidLAB LibH2.

Before you begin, it is best to close any Windows® applications, since Windows® may need to be rebooted during the installation process.

After you have downloaded and extracted the zip-file "CD_FluidLAB_LibH2_x64.zip", you will see the folder

CD_FluidLAB_LibH2

in your Windows Explorer®, Norton Commander® or other similar program you are using.

Open this folder by double-clicking on it.

In this folder you will see the following two files:

FluidLAB_LibH2_Docu_Eng.pdf
 FluidLAB_LibH2_64_Setup.msi
 LibH2.dll
 Setup.exe.

In order to run the installation of FluidLAB including, the LibH2 property library, double-click on the file

Setup.exe.

Installation of FluidLAB LibH2 starts with a window noting that the installer will guide you through the installation process. Click the "Next >" button to continue.

In the following dialog box, "Destination Location", the default path offered automatically for the installation of FluidLAB is

C:\Program Files\FuildLAB\LibH2 (for English version of Windows)
 C:\Programme\FuildLAB\LibH2 (for German version of Windows)

By clicking the "Browse..." button, you can change the installation directory before installation (see Figure 2.2).

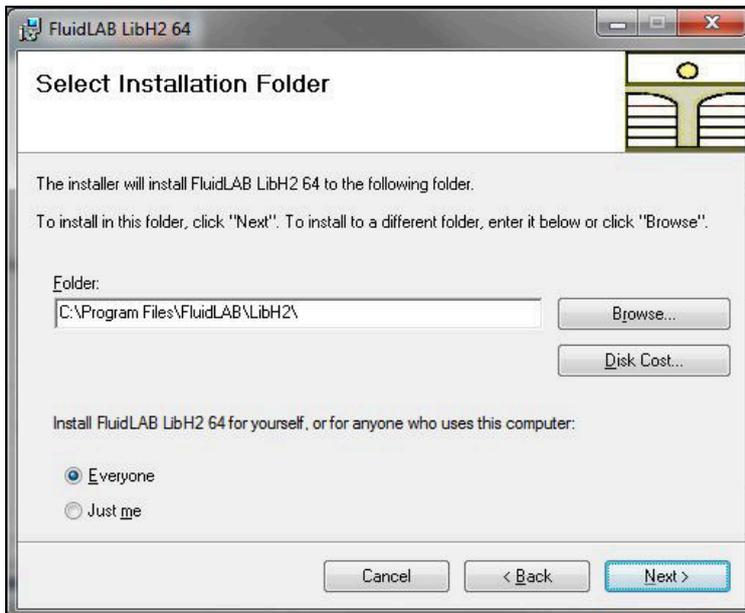

Figure 2.2: "Select Installation Folder"

Finally, click on "Next >" to continue installation; click "Next >" again in the "Confirm Installation" window which follows in order to start the installation of FluidLAB.

After FluidLAB has been installed, you will see the sentence "FluidLAB LibH2 64 has been successfully installed." Confirm this by clicking the "Close" button.

The installation program has copied the following files for LibH2 into the directory

"C:\Program Files\FuildLAB\LibH2" (for English version of Windows)

"C:\Programme\FuildLAB\LibH2" (for German version of Windows):

capt_ico_big.ico	libifcoremd.dll
LC.dll	libiomp5md.dll
LibH2.dll	libmmd.dll

Now, you have to overwrite the file "LibH2.dll" in your FluidLAB directory with the file of the same name provided on your CD with FluidLAB.

To do this, open the CD in "My Computer" and click on the file "LibH2.dll" in order to highlight it. Then click on the "Edit" menu in your Explorer and select "Copy".

Now, open your FluidLAB directory (the standard being C:\Program Files\FuildLAB\LibH2) and insert the file "LibH2.dll" by clicking the "Edit" menu in your Explorer and then select "Paste". Answer the question whether you want to replace the file by clicking the "Yes" button. Now, you have overwritten the file "LibH2.dll" successfully and the property functions are available in MATLAB.

The installation programs for both the 32-bit and the 64-bit Windows version have copied the following function files for LibH2 into the directory

"C:\Program Files\FuildLAB\LibH2" (for English version of Windows)

"C:\Programme\FuildLAB\LibH2" (for German version of Windows):

- Dynamic Link Library "LibH2.dll" and other necessary system DLL files.

- MATLAB®-Interface-Programme for calculable functions

a_ptx_H2	rho_ptx_H2
cp_ptx_H2	s_ptx_H2
cv_ptx_H2	t_ph_H2
eta_ptx_H2	t_ps_H2
h_ptx_H2	tmel_p_H2
kappa_ptx_H2	ts_p_H2
lam_ptx_H2	v_ptx_H2
nue_ptx_H2	w_ptx_H2
pmel_t_H2	x_ph_H2
Pr_ptx_H2	x_ps_H2
ps_T_H2	

Please note that there is a difference in the file extension of the function files.

The 32-bit installation program has copied function files with the file extension

.mexw32

and the 64-bit installation program has copied function files with the file extension

.mexw64

into your LibH2 directory (the standard being

C:\Program Files\FuildLAB\LibH2 (for English version of Windows)

C:\Programme\FuildLAB\LibH2 (for German version of Windows).

2.2 Licensing the LibH2 Property Library

The licensing procedure must be carried out when the prompt message appears. In this case, you will see the "License Information" window for LibH2 (see figure below).

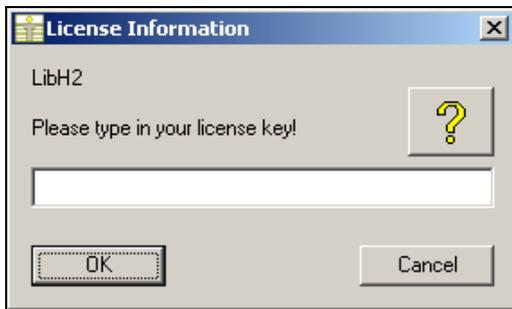

Figure 2.3: "License Information" window

Here you are asked to type in the license key which you have obtained from the Zittau/Goerlitz University of Applied Sciences. If you do not have this, or have any questions, you will find contact information on the "Content" page of this User's Guide or by clicking the yellow question mark in the "License Information" window. Then the following window will appear:

Figure 2.4: "Help" window

If you do not enter a valid license it is still possible to use MATLAB[®] by clicking "Cancel" twice. In this case, the LibH2 property library will display the result "-11111111" for every calculation.

The "License Information" window will appear every time you use FluidLAB LibH2 until you enter a license code to complete registration. If you decide not to use FluidLAB LibH2, you can uninstall the program following the instructions given in section 2.5 of this User's Guide.

2.3 Example: Calculation of the Specific Enthalpy $h = f(p,t,x)$ for Hydrogen in an M-File

Now we will calculate, step by step, the specific enthalpy h as a function of pressure p , temperature t and vapor fraction x for hydrogen using FluidLAB.

Please carry out the following instructions:

- Start Windows-Explorer, Total Commander, My Computer or another file manager program.
The following description refers to Windows-Explorer
- Your Windows-Explorer should be set to Details for a better view. Click the "Views" button and select "Details".
- Switch into the program directory of FluidLAB in which you will find the folder "\LibH2"; in the standard case:

"C:\Program Files\FluidLAB"	(for English version of Windows)
"C:\Programme\FluidLAB"	(for German version of Windows)
- Create the folder "\LibH2_Example". Click "File", then click "New" in the pop-up menu and afterwards select "Folder". Name the new folder "\LibH2_Example".
- You will see the following window:

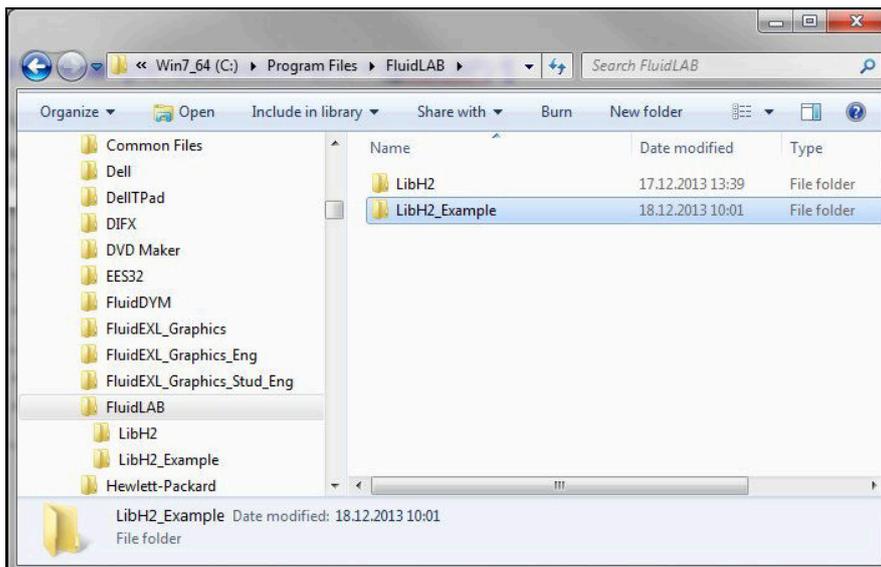

Figure 2.5: Folders "LibH2" and "LibH2_Example"

- Switch into the directory "\LibH2" within "\FluidLAB", the standard being:

"C:\Program Files\FluidLAB"	(for English version of Windows)
"C:\Programme\FluidLAB"	(for German version of Windows)

- If you have installed the 32-bit version of FluidLAB LibH2 you will see the following window:

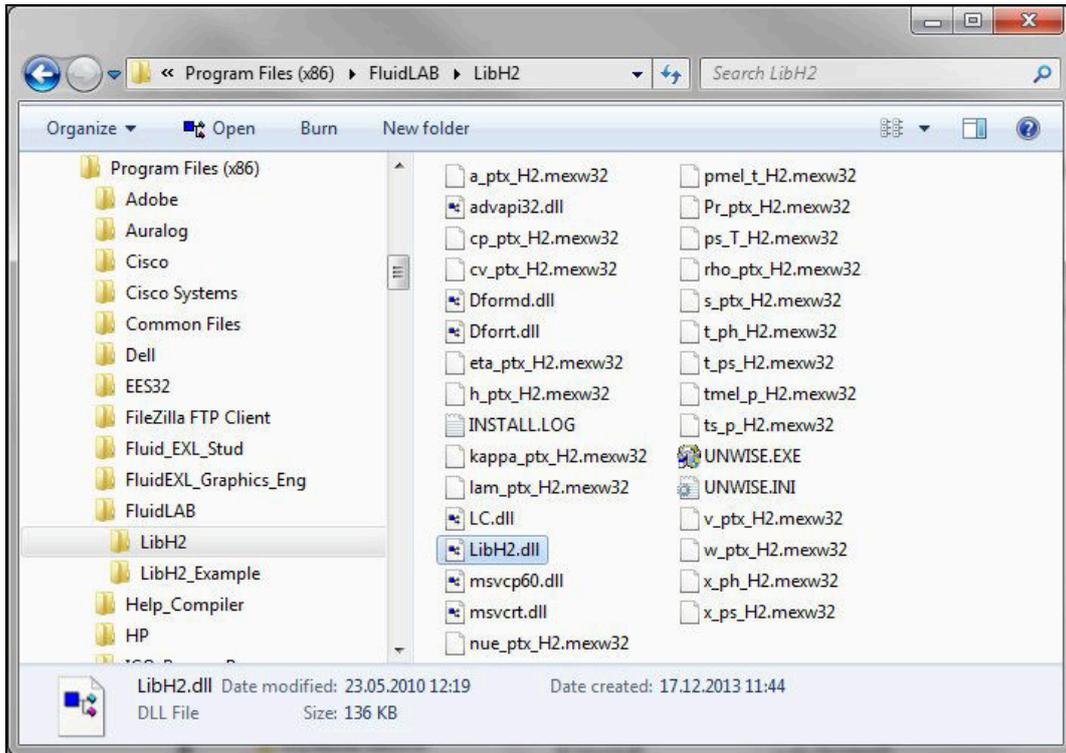

Figure 2.6: Contents of the folder "LibH2" (32-bit version)

- If you have installed the 64-bit version of FluidLAB LibH2 you will see the following window:

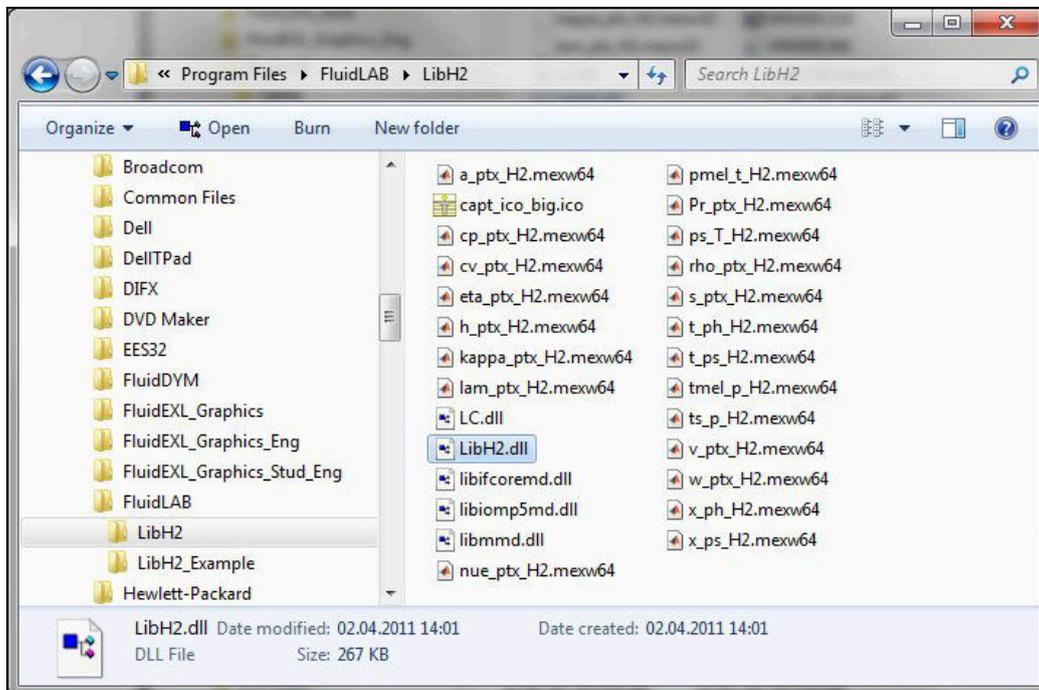

Figure 2.7: Contents of the folder "LibH2" (64-bit version)

If you have installed the **32-bit** version of LibH2 you will now have to copy the following files into the directory

"C:\Program Files\FluidLAB\LibH2_Example" (for English version of Windows)

"C:\Programme\FluidLAB\LibH2_Example" (for German version of Windows)

in order to calculate the function $h = f(p,t,x)$.

- The following files are needed:

- "advapi32.dll"
- "Dformd.dll"
- "Dfortt.dll"
- "h_ptx_H2.mexw32"
- "LibH2.dll"
- "LC.dll.dll"
- "msvc60.dll"
- "msvcrt.dll"

- Click the file "h_ptx_H2.mexw32", then click "Edit" in the upper menu bar and select "Copy".

- Switch into the directory

"C:\Program Files\FluidLAB\LibH2_Example" (for English version of Windows)

"C:\Programme\FluidLAB\LibH2_Example" (for German version of Windows),

click "Edit" and select "Paste".

- Repeat these steps in order to copy the other files listed above.

- You will see the following window:

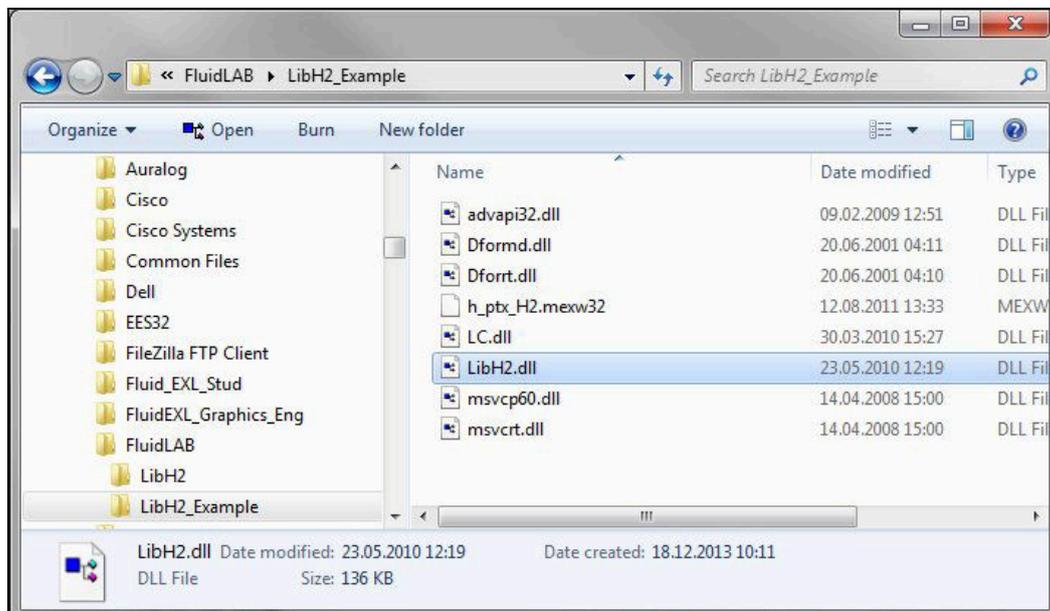

Figure 2.8: Contents of the folder "LibH2_Example" (32-bit)

If you have installed the **64-bit** version of LibH2 you will now have to copy the following files into the directory

"C:\Program Files\FluidLAB\LibH2_Example" (for English version of Windows)

"C:\Programme\FluidLAB\LibH2_Example" (for German version of Windows)

in order to calculate the function $h = f(p,t,x)$.

- The following files are needed:

- "h_ptx_H2.mexw64"
- "LC.dll"
- "LibH2.dll"
- "libifcoremd.dll"
- "libiomp5md.dll"
- "libmmd.dll."

- Click the file "h_ptx_LibH2.mexw64", then click "Edit" in the upper menu bar and select "Copy."

- Switch into the directory

"C:\Program Files\FluidLAB\LibH2_Example" (for English version of Windows)

"C:\Programme\FluidLAB\LibH2_Example" (for German version of Windows),

click "Edit" and then "Paste."

- Repeat these steps in order to copy the other files listed above. You may also select all the above-named files and then copy them as a group (press the Control button to enable multiple markings).

- You will see the following window:

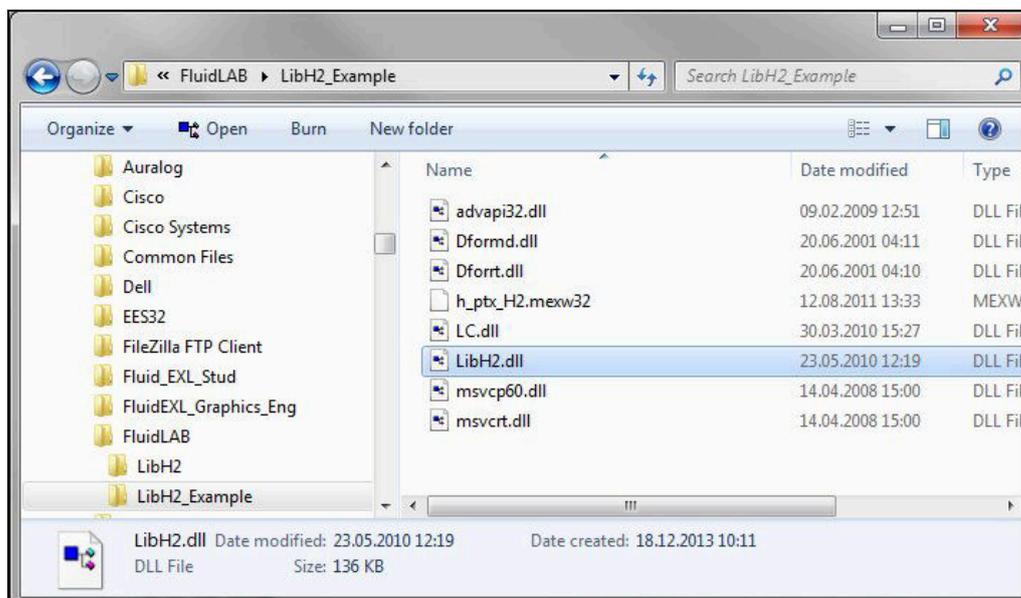

Figure 2.9: Contents of the folder "LibH2_Example" (64-bit)

- Start MATLAB® (if you have not started it already).
- Click the button marked in the next figure in order to open the folder "\LibH2_Example" in the "Current Directory" window.

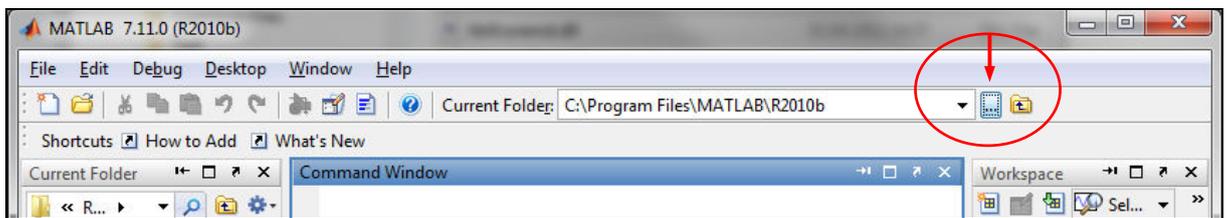

Figure 2.10: Selection of the working directory

- Find and select the directory
 - "C:\Program Files\FluidLAB\LibH2_Example" (for English version of Windows)
 - "C:\Programme\FluidLAB\LibH2_Example" (for German version of Windows)
 in the menu which appears (see the following figure).

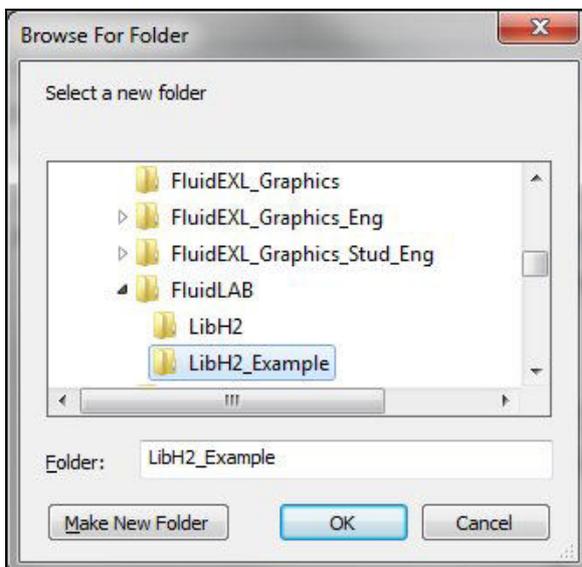

Figure 2.11: Choosing the "LibH2_Example" folder

- Confirm your selection by clicking the "OK" button.
- First of all you need to create an M-File in MATLAB®. Within MATLAB® click "File", then select "New" and afterwards click "M-File" in MATLAB 2006 or earlier versions or click "Script" in MATLAB R2010.
- If the "Editor" window appears as a separate window, you can embed it into MATLAB® by clicking the insertion arrow (see next figure) in order to obtain a better view.

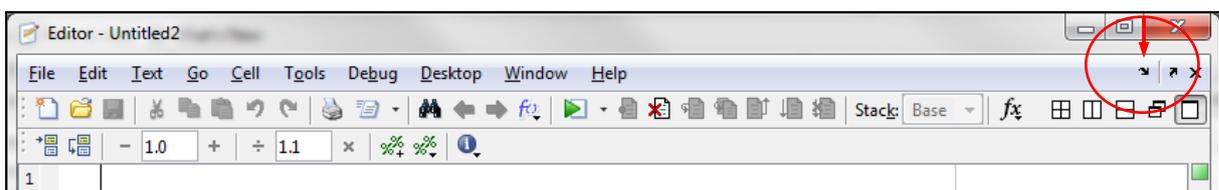

Figure 2.12: Embedding the "Editor" window

- In the figure below you will see the "Editor - Untitled" window.

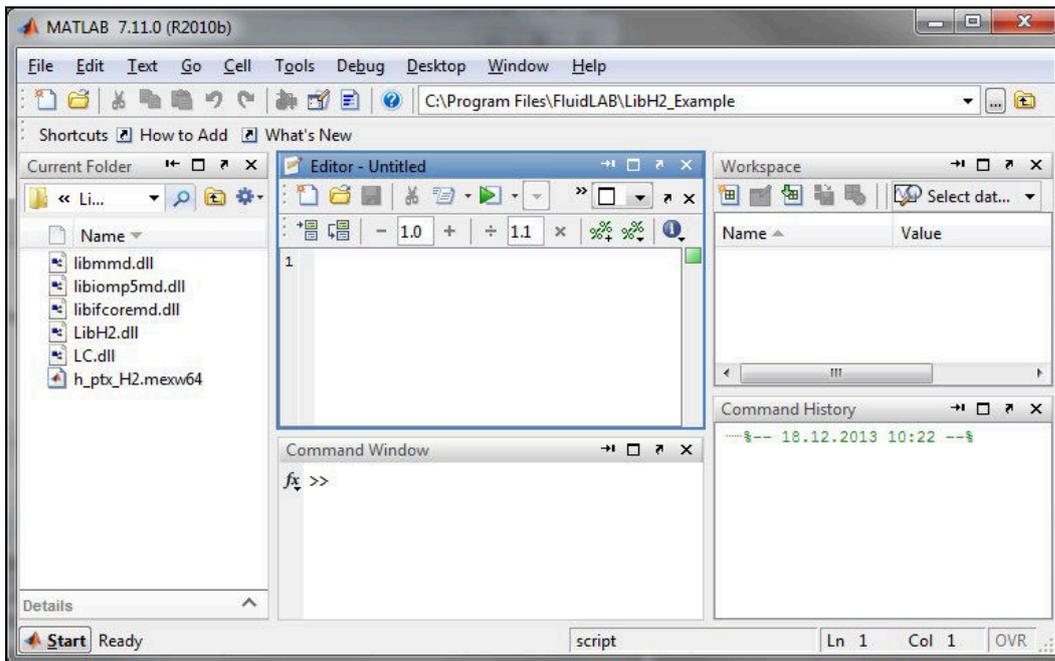

Figure 2.13: Embedded "Editor" window

- Now type the following lines in the "Editor - Untitled" window:

Text to be written:	Explanation:
<code>% h_ptx_H2.m</code>	file name as comment
<code>%%</code>	paragraph separation
<code>p=10; % pressure in bar</code>	declaration of the variables pressure, temperature, vapor fraction and the non- dimensional parameter NP specifying the form of H2 (H2- Normal and H2-Para)
<code>t=25; % temperature in °C</code>	
<code>x=-1; % vapor fraction</code>	
<code>NP=1; % H2 normal</code>	
<code>%%</code>	paragraph separation
<code>h=h_ptx_H2(p,t,x)</code>	function call
<code>%%</code>	paragraph separation

- Remarks:

- The program interprets the first line which starts with " % " to be a data description in "Current Directory"
- Paragraph separations which are mandatory are being realised through " %% ". By this, declaration of variables and calculation instructions are also being separated.
- The words which are printed in green, start with " % " and stand behind the variables are comments. In fact they are not necessary but they are reasonable for your overview and comprehensibility.
- You have to leave out the semicolons behind the numerical values if you wish to see the result for h and the input parameters as well.

The values of the function parameters in their corresponding units stand for:

- First operand: Value for $p = 10$ bar
(Range of validity: $p = 0.001$ bar ... 1210 bar)
- Second operand: Value for $t = 25$ °C
(Range of validity: $t = t_{\text{mel}}$ or t_{min} ... 126.85°C)
- Third operand: Value for $x = -1$

Since the wet-steam region is calculated automatically by the subprograms, the following fixed details on the vapor fraction x are to be considered when the value for x is entered:

Single-phase region

If the state point to be calculated is located in the single-phase region (liquid or superheated steam) $x = -1$ must be entered as a pro-forma value.

Wet-steam region

If the state point to be calculated is located in the wet steam region, a value for x between 0 and 1 ($x = 0$ for saturated liquid, $x = 1$ for saturated steam) must be entered.

When calculating wet steam either the given value for t and $p = -1$ or the given value for p and $t = -1$ and in both cases the value for x between 0 and 1 must be entered.

If p and t and x are entered as given values, the program considers p and t to be appropriate to represent the vapor pressure curve. If it is not the case the calculation for the property of the chosen function to be calculated results in -1000 .

(Vapor pressure curve of H₂-Para:

$$t_t = -259.35 \text{ °C} \dots t_c = 240.212 \text{ °C}$$

$$p_t = 0.0703991859 \text{ bar} \dots p_c = 12.837878 \text{ bar}$$

Vapor pressure curve of H₂-Normal:

$$t_t = -259,193 \text{ °C} \dots t_c = 240.212 \text{ °C}$$

$$p_t = 0.0770478607 \text{ bar} \dots p_c = 12.837878 \text{ bar}$$

- Fourth operand: Value for $NP = 1$

- Enter a value for NP into a cell

Please note that you have to enter the value $NP = 1$ for H₂-Normal.
In case H₂-Para is given, you have to enter the value $NP = 0$.

- Save the "M-File" by clicking the "File" button and then click "Save As...".
- The menu "Save file as:" appears; In this menu, the folder name "LibH2_Example" must be displayed in the "Save in:" field
- Next to "File name" you have to type in "Example_h_ptx_H2.m" and afterwards click the "Save" button.

Note.

The name of the example file has to be different in comparison to the name of the used function. For example, the file could not be named "h_ptx_H2.m" in this case. Otherwise an error message will appear during the calculation.

- You will now see the following window:

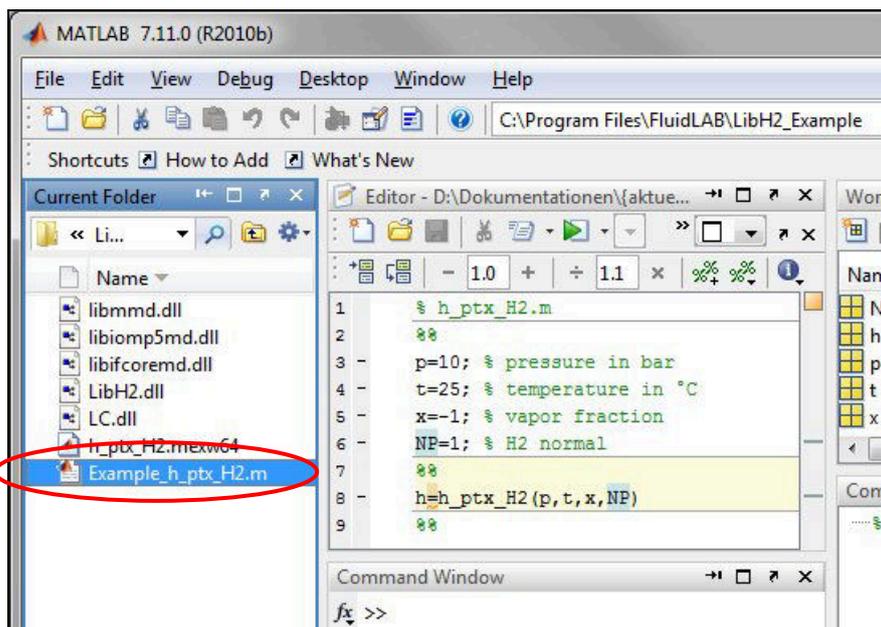

Figure 2.14: "Example_h_ptx_H2.m" M-file

- Within the "Current Directory" window the file "Example_h_ptx_H2.m" appears.
- Right-click this file and select "Run" in the menu which appears (see next Figure).

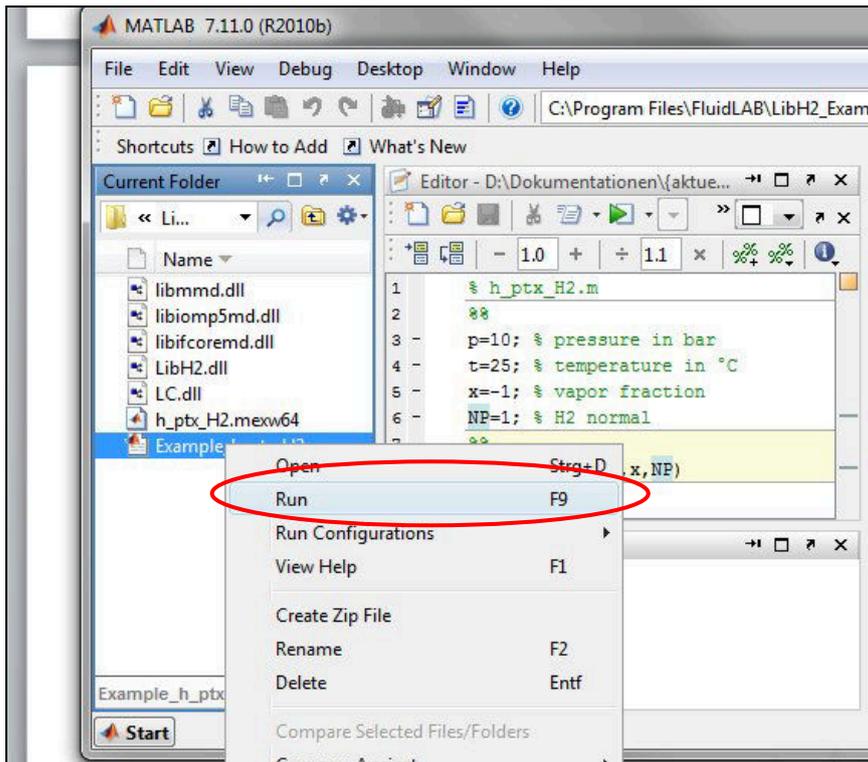

Figure 2.15: Running the "Example_h_ptx_H2.m" M-file

- You will see the following window:

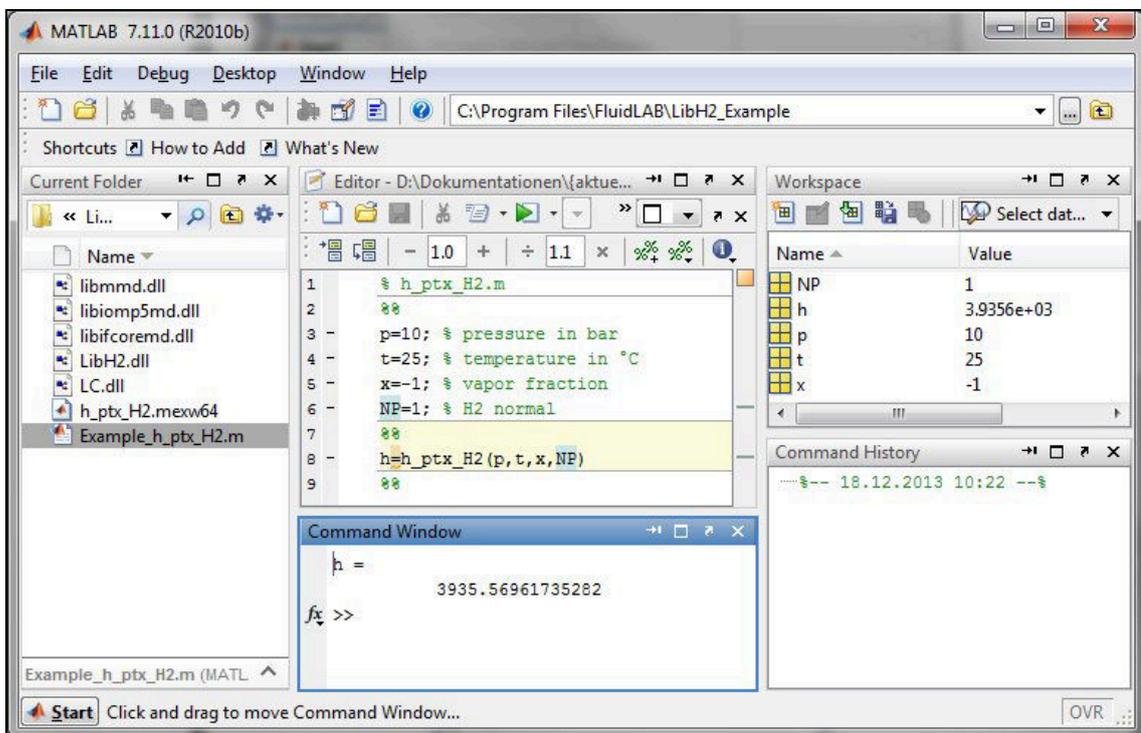

Figure 2.16: MATLAB® with calculated result

The result for h appears in the "Command Window".

⇒ The result in our sample calculation here is: " $h = 3935.56961735282$ ".

The corresponding unit is kJ/kg (see table of the property functions in Chapter 1).

To be able to calculate other values, you have to copy the associated mexw32 or mexw64 files as well because MATLAB® can only access functions that are located in the "Current Directory" window. The example calculated can be found in the directory

C:\Program Files\FluidLAB\He_Example" (for English version of Windows)

C:\Programme\FluidLAB\He_Example" (for German version of Windows),

and you may use it as a basis for further calculations using FluidLAB.

Hint!

If the input values are located outside the range of validity of LibH2, the calculation of the chosen function to be calculated function results in -1000. You can find more exact details on every function and its corresponding range of validity in the enclosed program documentation in Chapter 3.

2.4 Example: Calculation of the Specific Enthalpy $h = f(p,t,x)$ for Hydrogen in the Command Window

- Please follow the instructions from page 2/6 to 2/9.
- Start MATLAB® (if you have not started it already).
- Click the button marked in the following figure in order to open the folder "\LibH2_Example" in the window "Current Directory".

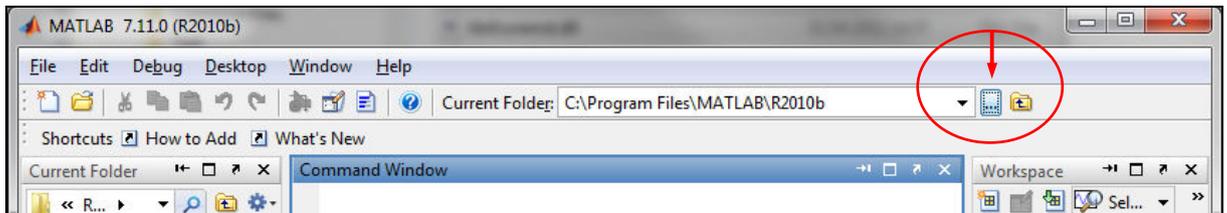

Figure 2.17: Selection of the working directory

- Find and select the directory
 "C:\Program Files\FluidLAB\LibH2_Example" (for English version of Windows)
 "C:\Programme\FluidLAB\LibH2_Example" (for German version of Windows)
 in the menu that appears (see figure below).

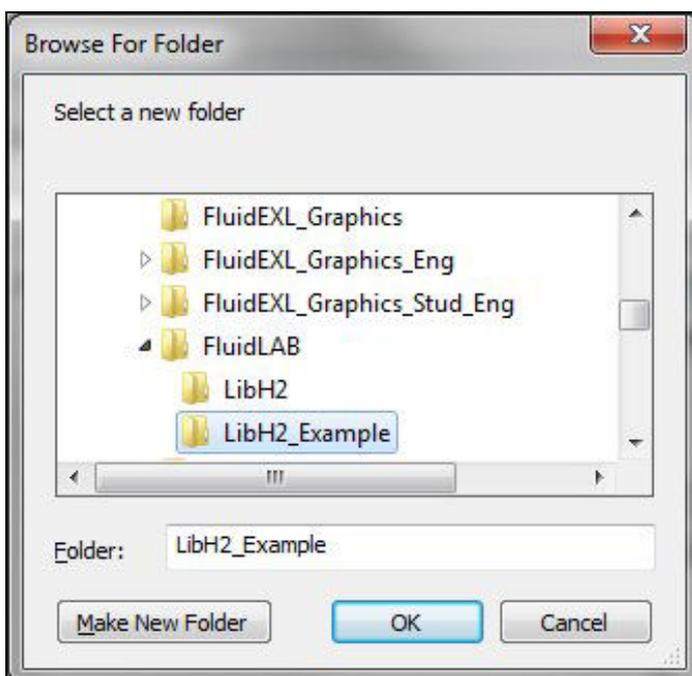

Figure 2.18: Choosing the "LibH2_Example" folder

- Confirm your selection by clicking the "OK" button.

- You will see the following window:

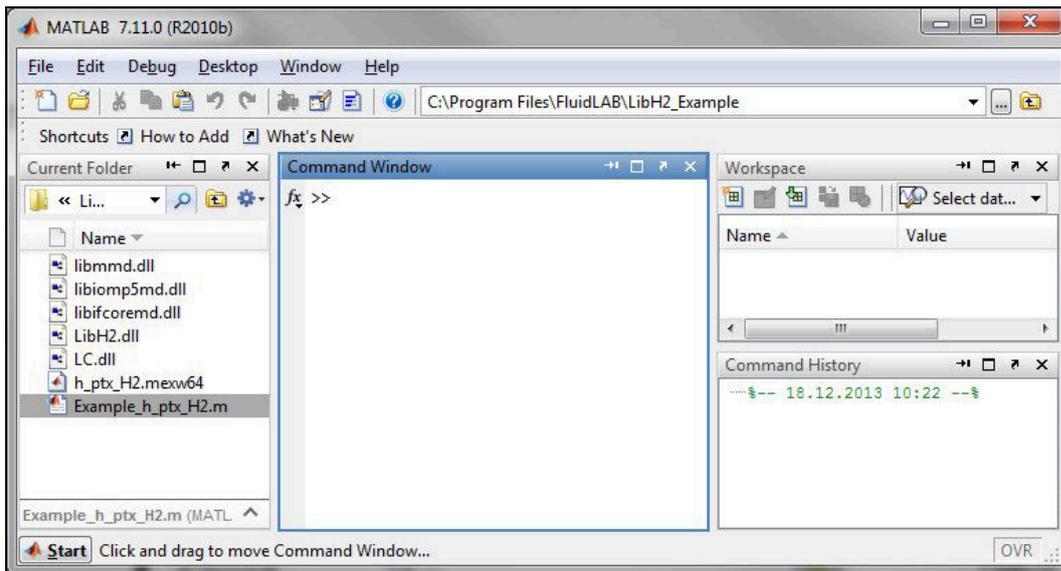

Figure 2.19: MATLAB® with necessary files

Corresponding to the table of property functions in Chapter 1 you have to call up the function "h_ptx_H2" as follows for calculating $h=f(p,t,x)$:

- Write "h=h_ptx_H2(10,25,-1,1)" within the "Command Window".

The values of the function parameters in their corresponding units stand for:

- **First operand: Value for $p = 10$ bar**
(Range of validity: $p = 0.001$ bar ... 1210 bar)
- **Second operand: Value for $t = 25$ °C**
(Range of validity: $t = t_{\text{mel}}$ or t_{min} ... 126.85°C)
- **Third operand: Value for $x = -1$**

Since the wet-steam region is calculated automatically by the subprograms, the following fixed details on the vapor fraction x are to be considered when the value for x is entered:

Single-phase region

If the state point to be calculated is located in the single-phase region (liquid or superheated steam) $x = -1$ must be entered as a pro-forma value.

Wet-steam region

If the state point to be calculated is located in the wet steam region, a value for x between 0 and 1 ($x = 0$ for saturated liquid, $x = 1$ for saturated steam) must be entered.

When calculating wet steam either the given value for t and $p = -1$ or the given value for p and $t = -1$ and in both cases the value for x between 0 and 1 must be entered.

If p and t and x are entered as given values, the program considers p and t to be appropriate to represent the vapor pressure curve. If it is not the case the calculation for the property of the chosen function to be calculated results in -1000 .

(Vapor pressure curve of H₂-Para:

$$t_t = -259.35 \text{ °C} \dots t_c = 240.212 \text{ °C}$$

$$p_t = 0.0703991859 \text{ bar} \dots p_c = 12.837878 \text{ bar}$$

Vapor pressure curve of H₂-Normal:

$$t_t = -259,193 \text{ °C} \dots t_c = 240.212 \text{ °C}$$

$$p_t = 0.0770478607 \text{ bar} \dots p_c = 12.837878 \text{ bar}$$

- Fourth operand: Value for $NP = 1$

- Enter a value for NP into a cell

Please note that you have to enter the value $NP = 1$ for H₂-Normal.

In case H₂-Para is given, you have to enter the value $NP = 0$.

- Confirm your entry by pressing the "ENTER" button.

- You will see the following window:

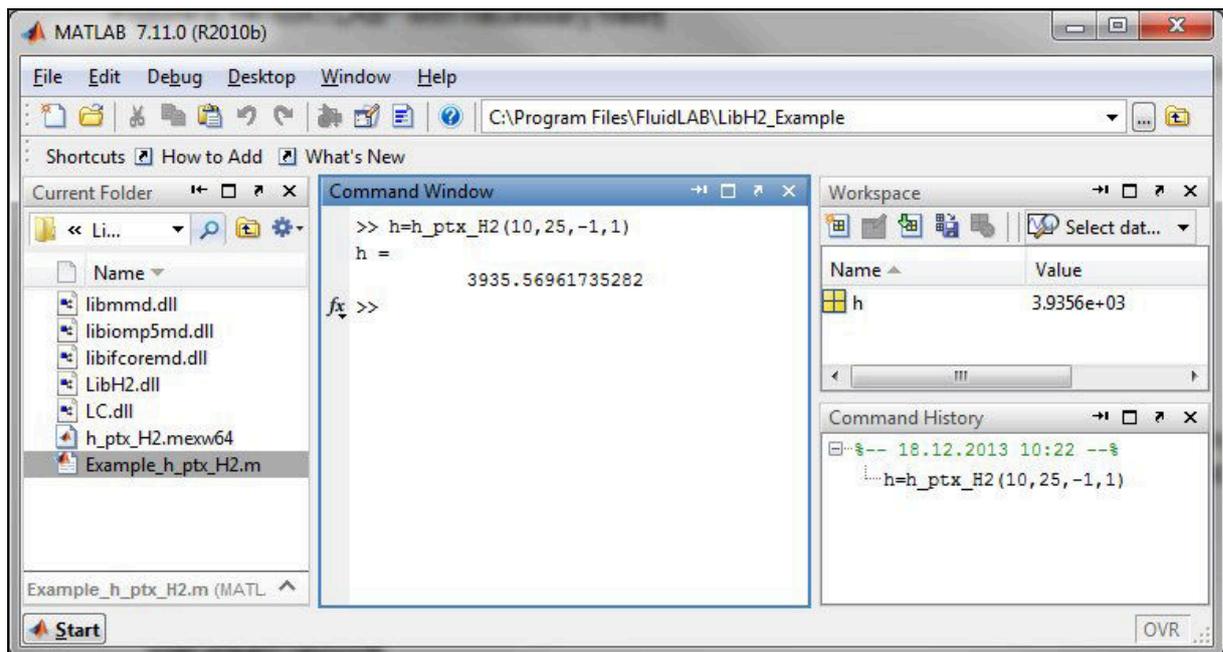

Figure 2.20: MATLAB® with calculated result

⇒ The result in our sample calculation here is: "h = 3935.56961735282".

The corresponding unit is kJ/kg (see table of the property functions in Chapter 1).

To be able to calculate other values, you will have to copy the respective mexw32 or mexw64 files into the working directory as well, because MATLAB® can only access functions that are located in the "Current Directory" window. The example calculated can be found in the directory

C:\Program Files\FluidLAB\LibH2_Example" (for English version of Windows)

C:\Programme\FluidLAB\LibH2_Example" (for German version of Windows),

and you may use it as a basis for further calculations using FluidLAB.

Note:

If the input values are located outside the range of validity, the result for the chosen function to be calculated results in -1000. You can find more exact details on every function and its corresponding range of validity in the enclosed program documentation in Chapter 3.

2.5 Removing FluidLAB including LibH2

To remove the LibH2 property library from your hard drive in Windows®, click "Start" in the Windows® task bar, select "Settings" and click "Control Panel".

Now double-click on "Add or Remove Programs".

Now double-click on "Add or Remove Programs". In the list box of the "Add or Remove Programs" window that appears select "FluidLAB LibH2" by clicking on it and click the "Change/Remove" button.

In the following dialog box click "Automatic" and then click the "Next>" button.

Confirm the following menu "Perform Uninstall" by clicking the "Finish" button.

Finally, close the "Add or Remove Programs" and "Control Panel" windows.

Now, FluidLAB has been removed.

If there is no library other than LibH2 installed, the directory "FluidLAB" will be removed as well.

3. Program Documentation

Thermal Diffusivity $a = f(p, t, x, NP)$

Function Name: **a_ptx_H2**

Subroutine with function value:
for call from Fortran **REAL*8 FUNCTION APTXH2(P,T,X,NP)**
REAL*8 P,T,X,NP

Subroutine with parameter:
for call from DLL **INTEGER*4 FUNCTION C_APTXH2(A,P,T,X,NP)**
REAL*8 A,P,T,X,NP

Input values:

P - Pressure p in bar
T - Temperature t in °C
X - Vapor fraction x (kg of saturated steam)/(kg wet steam)
NP - Calculation parameter for choosing H₂ - Normal or H₂ - Para

Result

APTXH2, A or a_ptx_H2 - Thermal diffusivity $a = \frac{\lambda \cdot v}{c_p}$ in m²/s

Range of validity

Temperature range:

H₂ - Para (NP = 0):

from $t_{\text{mel}}(p)$ or $t_{\text{min}} = t(p, \rho_{\text{max}})$ to 126.85°C at $p \geq p_t = 0.0703991859$ bar,
 with $\rho_{\text{max}} = 44.0$ mol/l ($v_{\text{min}} = 0.0112737843$ m³/kg)
 from $t_{\text{trip}} = -259.35$ °C to 126.85°C at $p \leq p_t = 0.0703991859$ bar

H₂ - Normal (NP = 1):

from $t_{\text{mel}}(p)$ or $t_{\text{min}} = t(p, \rho_{\text{max}})$ to 126.85°C at $p \geq p_t = 0.0770478607$ bar,
 with $\rho_{\text{max}} = 38.148$ mol/l ($v_{\text{min}} = 0.0130032114$ m³/kg)
 from $t_{\text{trip}} = -259.193$ °C to 126.85°C at $p \leq p_t = 0.0770478607$ bar

Pressure range: from 0.001 bar to 1210 bar

Details on wet steam and the vapor fraction x

The wet steam region is calculated automatically by the subprograms. For this purpose the following fixed details on the vapor fraction x are to be considered:

If the state point to be calculated is located in the single-phase region (liquid or superheated steam) $x = -1$ must be entered as a pro-forma value. Here the backward functions will also result in $x = -1$.

If the state point to be calculated is located in the two phase region (wet steam), either the value 0 or 1 has to be entered for x ($x = 0$ for boiling liquid, $x = 1$ for saturated steam). Here the backward functions will result in $x = 0$ or $x = 1$.

If the state point to be calculated is located in the two phase region, it is adequate to enter either the given value for t and $p = -1000$, or the given value for p and $t = -1000$, plus the value for x between 0 and 1. When calculating wet steam and p and t and x are entered as given values, the program will consider p and t to be appropriate to represent the saturation-pressure curve. If it is not the case the calculation for the quantity of the chosen function to be calculated results in -1000.

Boiling and dew curve:

3/2

H₂ – Normal (NP = 1): Temperature range from $t_t = -259.193^\circ\text{C}$ to $t_c = -240.212^\circ\text{C}$
Pressure range from $p_t = 0.0770478607$ bar to $p_c = 12.837878$ bar

H₂ – Para (NP = 0): Temperature range from $t_t = -259.35^\circ\text{C}$ to $t_c = -240.212^\circ\text{C}$
Pressure range from $p_t = 0.0703991859$ bar to $p_c = 12.837878$ bar

Results for wrong input values

Result **APT_XH2 = -1000, A = -1000** or **a_ptx_H2 = -1000** for Input values:

H₂-Normal (NP = 1):

Single phase region:

($x = -1$)

$p > 1210$ bar or $p < 0.001$ bar or
 $t > 126.85^\circ\text{C}$ or $t < t_{\text{mel}}(p)$ or $t < t(p, \rho_{\text{max}})$ at $p \geq p_t = 0.0770478607$ bar or
 $t < t_{\text{trip}} = -259.193^\circ\text{C}$ at $p < p_t = 0.0770478607$ bar
 $\rho_{\text{max}} = 38.148$ mol/l

Boiling or dew curve:

at $p = -1000$ and $t > -240.212^\circ\text{C}$ or $t < -259.35^\circ\text{C}$
at $t = -1000$ and $p > 12.837878$ bar or $p < 0.0770478607$ bar or
at $p > 12.837878$ bar or $p < 0.0770478607$ bar and
 $t > -240.212^\circ\text{C}$ or $t < -259.193^\circ\text{C}$

H₂-Para (NP = 0):

Single phase region:

($x = -1$)

$p > 1210$ bar or $p < 0.001$ bar or
 $t > 126.85^\circ\text{C}$ or $t < t_{\text{mel}}(p)$ or $t < t(p, \rho_{\text{max}})$ at $p \geq p_t = 0.0703991859$ bar or
 $t < t_{\text{trip}} = -259.35^\circ\text{C}$ at $p < p_t = 0.0703991859$ bar
 $\rho_{\text{max}} = 44.0$ mol/l

Boiling or dew curve:

at $p = -1000$ and $t > -240.212^\circ\text{C}$ or $t < -259.35^\circ\text{C}$
at $t = -1000$ and $p > 12.837878$ bar or $p < 0.0703991859$ bar or
at $p > 12.837878$ bar or $p < 0.0703991859$ bar and
 $t > -240.212^\circ\text{C}$ or $t < -259.35^\circ\text{C}$

Details on wet steam and the vapor fraction x

The wet steam region is calculated automatically by the subprograms. For this purpose the following fixed details on the vapor fraction x are to be considered:

If the state point to be calculated is located in the single-phase region (liquid or superheated steam) $x = -1$ must be entered as a pro-forma value. Here the backward functions will also result in $x = -1$.

If the state point to be calculated is located in the two phase region (wet steam), either the value 0 or 1 has to be entered for x ($x = 0$ for boiling liquid, $x = 1$ for saturated steam). Here the backward functions will result in $x = 0$ or $x = 1$.

If the state point to be calculated is located in the two phase region, it is adequate to enter either the given value for t and $p = -1000$, or the given value for p and $t = -1000$, plus the value for x between 0 and 1. When calculating wet steam and p and t and x are entered as given values, the program will consider p and t to be appropriate to represent the saturation-pressure curve. If it is not the case the calculation for the quantity of the chosen function to be calculated results in -1000.

Details on wet steam and the vapor fraction x

The wet steam region is calculated automatically by the subprograms. For this purpose the following fixed details on the vapor fraction x are to be considered:

If the state point to be calculated is located in the single-phase region (liquid or superheated steam) $x = -1$ must be entered as a pro-forma value. Here the backward functions will also result in $x = -1$.

If the state point to be calculated is located in the two phase region (wet steam), either the value 0 or 1 has to be entered for x ($x = 0$ for boiling liquid, $x = 1$ for saturated steam). Here the backward functions will result in $x = 0$ or $x = 1$.

If the state point to be calculated is located in the two phase region, it is adequate to enter either the given value for t and $p = -1000$, or the given value for p and $t = -1000$, plus the value for x between 0 and 1. When calculating wet steam and p and t and x are entered as given values, the program will consider p and t to be appropriate to represent the saturation-pressure curve. If it is not the case the calculation for the quantity of the chosen function to be calculated results in -1000.

Boiling and dew curve:

Details on the vapor fraction x and wet steam

The wet steam region is calculated automatically by the sub-programs. Using the given values for p and s , the program determines whether the state point to be calculated is located in the single phase region (liquid or superheated steam) or in the wet steam region. After that, the calculation is carried out for the certain region.

Wet steam region:

H₂ - Normal (NP = 1): Pressure range from $p_t = 0.0770478607$ bar to $p_c = 12.837878$ bar

H₂ - Para (NP = 0): Pressure range from $p_t = 0.0703991859$ bar to $p_c = 12.837878$ bar

Details on wet steam and the vapor fraction x

The wet steam region is calculated automatically by the subprograms. For this purpose the following fixed details on the vapor fraction x are to be considered:

If the state point to be calculated is located in the single-phase region (liquid or superheated steam) $x = -1$ must be entered as a pro-forma value. Here the backward functions will also result in $x = -1$.

If the state point to be calculated is located in the two phase region (wet steam), either the value 0 or 1 has to be entered for x ($x = 0$ for boiling liquid, $x = 1$ for saturated steam). Here the backward functions will result in $x = 0$ or $x = 1$.

If the state point to be calculated is located in the two phase region, it is adequate to enter either the given value for t and $p = -1000$, or the given value for p and $t = -1000$, plus the value for x between 0 and 1. When calculating wet steam and p and t and x are entered as given values, the program will consider p and t to be appropriate to represent the saturation-pressure curve. If it is not the case the calculation for the quantity of the chosen function to be calculated results in -1000.

Boiling and dew curve:

Details on the calculation of wet steam

The wet steam region is calculated automatically by the sub-programs. Using the given values for p and h , the program determines whether the state point to be calculated is located in the single phase region (liquid or superheated steam) or in the wet steam region. When calculating wet steam, x will be calculated, otherwise the function to be calculated results in $x = -1$.

Wet steam region:

H₂ - Normal (NP = 1): Pressure range from $p_t = 0.0770478607$ bar to $p_c = 12.837878$ bar

H₂ - Para (NP = 0): Pressure range from $p_t = 0.0703991859$ bar to $p_c = 12.837878$ bar

Results for wrong input values

Result **XPHH2, X = -1** or **x_ph_H2 = -1** for Input values:

In case the point of state is located in the single phase region

H₂-Para (NP = 0): $p < 0.0703991859$ bar or $p > 12.837878$ bar

H₂-Normal (NP = 1): $p < 0.0770478607$ bar or $p > 12.837878$ bar

Backward Function: Vapor Fraction $x = f(p,s,NP)$

Function Name: **x_ps_H2**

Subroutine with function value: **REAL*8 FUNCTION XPSH2(P,S,NP)**
for call from Fortran REAL*8 P,S,NP

Subroutine with parameter: **INTEGER*4 FUNCTION C_XPSH2(X,P,S,NP)**
for call from DLL REAL*8 X,P,S,NP

Input values:

- P** - Pressure p in bar
- S** - Specific entropy s in kJ/(kg K)
- NP** - Calculation parameter for choosing H₂ - Normal or H₂ - Para

Result

XPSH2, X or **x_ps_H2** - Vapor fraction x in (kg saturated steam/kg wet steam)

Range of validity

Temperature range:

H₂ - Para (NP = 0):

from $t_{mel}(p)$ or $t_{min} = t(p, \rho_{max})$ to 126.85°C at $p \geq p_t = 0.0703991859$ bar,
with $\rho_{max} = 44.0$ mol/l ($v_{min} = 0.0112737843$ m³/kg)
from $t_{trip} = -259.35$ °C to 126.85°C at $p \leq p_t = 0.0703991859$ bar

H₂ - Normal (NP = 1):

from $t_{mel}(p)$ or $t_{min} = t(p, \rho_{max})$ to 126.85°C at $p \geq p_t = 0.0770478607$ bar,
with $\rho_{max} = 38.148$ mol/l ($v_{min} = 0.0130032114$ m³/kg)
from $t_{trip} = -259.193$ °C to 126.85°C at $p \leq p_t = 0.0770478607$ bar

Pressure range: from 0.001 bar to 1210 bar

Details on the calculation of wet steam

The wet steam region is calculated automatically by the sub-programs. Using the given values for p and s , the program determines whether the state point to be calculated is located in the single phase region (liquid or superheated steam) or in the wet steam region. When calculating wet steam, x will be calculated, otherwise the function to be calculated results in $x = -1$.

Wet steam region:

H₂ - Normal (NP = 1): Pressure range from $p_t = 0.0770478607$ bar to $p_c = 12.837878$ bar

H₂ - Para (NP = 0): Pressure range from $p_t = 0.0703991859$ bar to $p_c = 12.837878$ bar

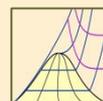

Results for wrong input values

Result **XPSH2, X = -1** or **x_ps_H2 = -1** for Input values:

In case the point of state is located in the single phase region

H₂-Para (NP = 0): $p < 0.0703991859$ bar or $p > 12.837878$ bar

H₂-Normal (NP = 1): $p < 0.0770478607$ bar or $p > 12.837878$ bar

Property Libraries for Calculating Heat Cycles, Boilers, Turbines and Refrigerators

Water and Steam

Library LibIF97

- Industrial Formulation IAPWS-IF97 (Revision 2007)
- Supplementary Standards
 - IAPWS-IF97-S01
 - IAPWS-IF97-S03rev
 - IAPWS-IF97-S04
 - IAPWS-IF97-S05
- IAPWS Revised Advisory Note No. 3 on Thermodynamic Derivatives (2008)

Library LibSBTL_IF97 Library LibSBTL_95

- Extremely fast property calculations according to the IAPWS Guideline 2015
- Spline-based Table Look-up Method (SBTL) applied to the Industrial Formulation IAPWS-IF97 and to the Scientific Formulation IAPWS-95 for Computational Fluid Dynamics and simulating non-stationary processes

Humid Combustion Gas Mixtures

Library LibHuGas

- Model: Ideal mixture of the real fluids:
 - CO₂ - Span, Wagner
 - H₂O - IAPWS-95
 - O₂ - Schmidt, Wagner
 - N₂ - Span et al.
 - Ar - Tegeler et al.
- and of the ideal gases:
 - SO₂, CO, Ne
- (Scientific Formulation of Bucker et al.)
- Consideration of:
 - Dissociation from VDI 4670
 - Poynting effect

Humid Air

Library LibHuAir

- Model: Ideal mixture of the real fluids:
 - Dry air from Lemmon et al.
 - Steam, water and ice from IAPWS-IF97 and IAPWS-06
- Consideration of:
 - Condensation and freezing of steam
 - Dissociation from VDI 4670
 - Poynting effect from ASHRAE RP-1485

Carbon Dioxide Including Dry Ice

Library LibCO2

Formulation of Span and Wagner (1996)

Seawater

Library LibSeaWa

STEAG RKB, Leuna	08/2003
eta Energieberatung, Pfaffenhofen	08/2003
exergie, Dresden	09/2003
AWTEC, Zurich, Switzerland	09/2003
Energie, Timelkam, Austria	09/2003
Electrowatt-EKONO, Zurich, Switzerland	09/2003
LG, Annaberg-Buchholz	10/2003
FZR Forschungszentrum, Rossendorf/Dresden	10/2003
EnviCon & Plant Engineering, Nuremberg	11/2003
Visteon, Kerpen	11/2003
VEO Vulkan Energiewirtschaft Oderbruecke, Eisenhuettenstadt	11/2003
Stadtwerke Hannover	11/2003
SaarEnergie, Saarbruecken	11/2003
Fraunhofer-Gesellschaft, Munich	12/2003
Erfurt University of Applied Sciences, Department of Supply Engineering	12/2003
SorTech, Freiburg	12/2003
Mainova, Frankfurt	12/2003
Energieversorgung Halle	12/2003

2002

Hamilton Medical AG, Rhaezuens, Switzerland	01/2002
Bochum University of Applied Sciences, Department of Thermo- and Fluid Dynamics	01/2002
SAAS, Possendorf/Dresden	02/2002
Siemens, Karlsruhe (general license for the WinIS information system)	02/2002

FZR Forschungszentrum, Rossendorf/Dresden	03/2002
CompAir, Simmern	03/2002
GKS Gemeinschaftskraftwerk, Schweinfurt	04/2002
ALSTOM Power Baden, Switzerland (group licenses)	05/2002
InfraServ, Gendorf	05/2002
SoftSolutions, Muehlhausen (company license)	05/2002
DREWAG, Dresden (company license)	05/2002
SOFBID, Zwingenberg	06/2002
(general EBSILON program license)	
Kleemann Engineering, Dresden	06/2002
Caliqua, Basel, Switzerland (company license)	07/2002
PCK Raffinerie, Schwedt (group license)	07/2002
Fischer-Uhrig Engineering, Berlin	08/2002
Fichtner Consulting & IT, Stuttgart	08/2002
(company licenses and distribution)	
Stadtwerke Duisburg	08/2002
Stadtwerke Hannover	09/2002
Siemens Power Generation, Goerlitz	10/2002
Energieversorgung Halle (company license)	10/2002
Bayer, Leverkusen	11/2002
Dillinger Huette, Dillingen	11/2002
G.U.N.T. Geraetebau, Barsbuettel	12/2002
(general license and training test benches)	
VEAG, Berlin (group license)	12/2002

2001

ALSTOM Power, Baden, Switzerland	01/2001, 06/2001 12/2001
KW2 B. V., Amersfoot, Netherlands	01/2001, 11/2001
Eco Design, Saitamaken, Japan	01/2001
M&M Turbine Technology, Bielefeld	01/2001, 09/2001
MVV Energie, Mannheim	02/2001
Technical University of Dresden, Department of Power Machinery and Plants	02/2001
